## 1. Introduction

We have launched a Special Issue of *Axioms* which focuses on the generalization of Riemannian spaces and their mappings. This Special Issue provides a platform to showcase the latest achievements in many branches of theoretical and practical studies of mathematics, which relate to the theory of Riemannian and generalized Riemannian spaces and their mappings. The scope of this Special Issue includes Riemannian Spaces and generalizations, Kenmotsu manifolds, Kähler manifolds, manifolds with non-symmetric linear connection, cosymplectic manifolds, contact manifolds, statistical manifolds, Minkowski spaces, geodesic mappings, almost geodesic mappings, holomorphically projective mappings, warped product of manifolds, complex space forms, quaternionic space forms, golden manifolds, inequalities, invariants, immersions, etc. Potential authors are encouraged to submit papers that present new ideas in the field of differential geometry in addition to the above topics. Given the broad scope and widespread interest in this topic, more works should be published in this area. It is expected that a follow-up Special Issue, "Differential Geometry and Its Application II", will be published in due course.

## 2. Overview of the Published Papers

This Special Issue contains 16 papers which were accepted for publication after a rigorous reviewing process.

In their study (Contribution 1), Cornelia-Livia Bejan, Galia Nakova and Adara M. Blaga use a Kähler B-manifold (i.e., a Kähler manifold with a Norden metric) to obtain some corresponding results from the Kählerian and para-Kählerian context concerning the Bochner curvature. They prove that such a manifold is of constant totally real sectional curvatures if and only if it is a holomorphic Einstein, Bochner flat manifold. Moreover, they provide the necessary and sufficient conditions for a gradient Ricci soliton or a holomorphic  $\eta$ -Einstein Kähler manifold with a Norden metric to be Bochner flat. Finally, they show that a Kähler B-manifold is of quasi-constant totally real sectional curvatures if and only if it is a holomorphic  $\eta$ -Einstein, Bochner flat manifold.

In another study (Contribution 2), Jamal Oudetalah, Rehab Alharbi and Iqbal M. Batiha define the so-called pairwise  $r$ -compactness in topological and bitopological spaces. In particular, several inferred properties of the  $r$ -compact spaces and their connections with other topological and bitopological spaces are studied theoretically. As a result, several novel theorems of the  $r$ -compact space are generalized in the pairwise  $r$ -compact space. The results established in this research paper are new in the field of topology.

The authors of Contribution 3, Halil İbrahim Yıldız, Abdul Haseeb and Fatemah Mo-farreh, investigate a Kenmotsu manifold satisfying certain curvature conditions endowed with  $\star - \eta$ -Ricci solitons. First, they find some necessary conditions for such a manifold to be  $\phi$ -Einstein. Then, they study the notion of  $\star - \eta$ -Ricci soliton on this manifold and prove some significant results related to this notion. Finally, they construct a nontrivial example of three-dimensional Kenmotsu manifolds to verify some of their results.

The authors of Contribution 4, Jae Min Lee and Byungdo Park, construct a model of differential  $K$ -theory using superbundles with a  $\mathbb{Z}/2\mathbb{Z}$ -graded connection and a differential
