Differential Models An Introduction With Mathcad:

Differential Models Alexander Solodov, Valery Ochkov, 2005 Differential equations are often used in mathematical models for technological processes or devices However the design of a differential mathematical model is crucial and difficult in engineering As a hands on approach to learn how to pose a differential mathematical model the authors have selected 9 examples with important practical application and treat them as following Problem setting and physical model formulation Designing the differential mathematical model Integration of the differential equations Visualization of results Each step of the development of a differential model is enriched by respective Mathcad 11 commands today's necessary linkage of engineering significance and high computing complexity TOC Differential Mathematical Models Integrable Differential Equations Dynamic Model of the System with Heat Engineering Stiff Differential Equations Heat Transfer near the Critical Point The Faulkner Skan Equation of Boundary Layer The Rayleigh Equation Hydronamic Instability Kinematic Waves of Concentration in Ion Exchange Filters Kinematic Shock Waves Numerical Modelling of the CPU board Temperature Field Temperature Waves
