problem of orthogonalization with invertible squares in modules over C algebras Particular modules that are considered in detail include modules of matrices matrix polynomials matrix valued functions linear operators and others One of the central features of this book is the interplay between orthogonal polynomials and their generalizations on the one hand and operator theory especially the theory of Toeplitz marices and operators and Fredholm and Wiener Hopf operators on the other hand The book is of interest to both engineers and specialists in analysis *One-dimensional Functional Equations* Genrich Belitskii,Vadim Tkachenko,2012-12-06 The monograph is devoted to the study of functional equations with the transformed argument on the real line and on the unit circle Such equations systematically arise in dynamical systems differential equations probabilities singularities of smooth mappings and other areas The purpose of the book is to present modern methods and new results in the subject with an emphasis on a connection between local and global solvability The general concepts developed in the book are applicable to multidimensional functional equations Some of the methods are presented for the first time in the monograph literature The book is addressed to graduates and researchers interested in dynamical systems differential equations operator theory or the theory of functions and their applications **Operator Theory, Operator Algebras and Related Topics** Aurelian Gheondea,Radu-Nicolae Gologan,Dan Timotin,1997 **Topics in Pseudo-DIfferential Operators** S D Zaidman,1996-10-29 This Research Note presents in a clear and detailed manner a certain group of results pertaining to some variants extensions and generalizations on the theory of pseudo differential operators as introduced in the pioneering work of Kohn Nirenberg The author presents a discussion of concepts of order true order and asymptotic expansions for general linear operators in some vector spaces following a pattern appearing in pseudo differential operator theory The book is intended mainly for an audience of operator theorists at a fairly elementary level its main objective a unitary presentation of articles written by the author over a number of years Spectral Operator Theory and Related Topics Vladimir Aleksandrovich Marchenko,1994 The collection contains the papers of mathematicians who are participants of the seminar on Mathematical Physics in Kharkov Ukraine The papers are mainly devoted to nontraditional problems of spectral theory of disordered systems to the spectral aspects of homogenization and of properties of ergodic dynamical systems
