Digital Neural Networks:

Digital Neural Networks Sun Yuan Kung,1993 Intended for engineers and researchers interested in the applications of neural networks to signal and image processing this book is theoretically based with emphasis on application and implementation Coverage includes neural networks for representation unsupervised networks for association classification neural networks for generalization restoration neural net and conventional optimization techniques and special purpose supercomputers for neural nets

Pulsed Neural Networks Wolfgang Maass,Christopher M. Bishop,2001-01-26 Most practical applications of artificial neural networks are based on a computational model involving the propagation of continuous variables from one processing unit to the next In recent years data from neurobiological experiments have made it increasingly clear that biological neural networks which communicate through pulses use the timing of the pulses to transmit information and perform computation This realization has stimulated significant research on pulsed neural networks including theoretical analyses and model development neurobiological modeling and hardware implementation This book presents the complete spectrum of current research in pulsed neural networks and includes the most important work from many of the key scientists in the field Terrence J Sejnowski s foreword Neural Pulse Coding presents an overview of the topic The first half of the book consists of longer tutorial articles spanning neurobiology theory algorithms and hardware The second half contains a larger number of shorter research chapters that present more advanced concepts The contributors use consistent notation and terminology throughout the book Contributors Peter S Burge Stephen R Deiss Rodney J Douglas John G Elias Wulfram Gerstner Alister Hamilton David Horn Axel Jahnke Richard Kempter Wolfgang Maass Alessandro Mortara Alan F Murray David P M Northmore Irit Opher Kostas A Papathanasiou Michael Recce Barry J P Rising Ulrich Roth Tim Sch nauer Terrence J Sejnowski John Shawe Taylor Max R van Daalen J Leo van Hemmen Philippe Venier Hermann Wagner Adrian M Whatley Anthony M Zador

VLSI for Neural Networks and Artificial Intelligence Jose G. Delgado-Frias,W.R. Moore,2013-06-29 Neural network and artificial intelligence algorithms and computing have increased not only in complexity but also in the number of applications This in turn has posed a tremendous need for a larger computational power that conventional scalar processors may not be able to deliver efficiently These processors are oriented towards numeric and data

manipulations Due to the neurocomputing requirements such as non programming and learning and the artificial intelligence requirements such as symbolic manipulation and knowledge representation a different set of constraints and demands are imposed on the computer architectures organizations for these applications Research and development of new computer architectures and VLSI circuits for neural networks and artificial intelligence have been increased in order to meet the new performance requirements This book presents novel approaches and trends on VLSI implementations of machines for these applications Papers have been drawn from a number of research communities the subjects span analog and digital VLSI design computer design computer architectures neurocomputing and artificial intelligence techniques This book has been organized into four subject areas that cover the two major categories of this book the areas are analog circuits for neural networks digital implementations of neural networks neural networks on multiprocessor systems and applications and VLSI machines for artificial intelligence The topics that are covered in each area are briefly introduced below

The Handbook of Brain Theory and Neural Networks Michael A. Arbib,2003 This second edition presents the enormous progress made in recent years in the many subfields related to the two great questions how does the brain work and How can we build intelligent machines This second edition greatly increases the coverage of models of fundamental neurobiology cognitive neuroscience and neural network approaches to language Midwest

World Congress on Neural Networks Paul Werbos,Harold Szu,Bernard Widrow,2021-09-09 Centered around 20 major topic areas of both theoretical and practical importance the World Congress on Neural Networks provides its registrants from a diverse background encompassing industry academia and government with the latest research and applications in the neural network field

VLSI Neural Network Systems Yuzo Hirai,1992 This extremely expensive little book is probably worth the exorbitant price Not only does the author introduce state of the art research on both VLSI and neural networks he also describes a model for basic chip design Surprisingly well written the material is appropriate for anyone with an interest in neural networks and background in basic mathematics and electronic engineering Annotation copyright by Book News Inc Portland OR
