Differential And Integral A Constructive Introduction To Classical Analysis:

Differential and Integral Paul Lorenzen, 1971 Differential und Integral Paul Lorenzen, 1965 *The Adventure of Reason* Paolo Mancosu, 2014-01-09 Paolo Mancosu presents a series of innovative studies in the history and the philosophy of logic and mathematics in the first half of the twentieth century The Adventure of Reason is divided into five main sections history of logic from Russell to Tarski foundational issues Hilbert's program constructivity Wittgenstein's mathematics and phenomenology Weyl Becker Mahnke nominalism Quine Tarski semantics Tarski Carnap Neurath Mancosu exploits extensive untapped archival sources to make available a wealth of new material that deepens in significant ways our understanding of these fascinating areas of modern intellectual history At the same time the book is a contribution to recent philosophical debates in particular on the prospects for a successful nominalist reconstruction of mathematics the nature of finitist intuition the viability of alternative definitions of logical consequence and the extent to which phenomenology can hope to account for the exact sciences Computability B. Jack Copeland, Carl J. Posy, Oron Shagrir, 2015-01-30 Computer scientists mathematicians and philosophers discuss the conceptual foundations of the notion of computability as well as recent theoretical developments In the 1930s a series of seminal works published by Alan Turing Kurt G del Alonzo Church and others established the theoretical basis for computability This work advancing precise characterizations of effective algorithmic computability was the culmination of intensive investigations into the foundations of mathematics In the decades since the theory of computability has moved to the center of discussions in philosophy computer science and cognitive science In this volume distinguished computer scientists mathematicians logicians and philosophers consider the conceptual foundations of computability in light of our modern understanding Some chapters focus on the pioneering work by Turing G del and Church including the Church Turing thesis and G del's response to Church's and Turing's proposals Other chapters cover more recent technical developments including computability over the reals G del's influence on mathematical logic and on recursion theory and the impact of work by Turing and Emil Post on our theoretical understanding of online and interactive computing and others relate computability and complexity to issues in the philosophy of mind the philosophy of science and the philosophy of mathematics Contributors Scott Aaronson Dorit Aharonov B Jack Copeland Martin Davis Solomon Feferman Saul Kripke Carl J Posy Hilary Putnam Oron Shagrir Stewart Shapiro Wilfried Sieg Robert I Soare Umesh V Vazirani **Constructivism and Science** Robert E. Butts, J.R. Brown, 2012-12-06 The idea to produce the current volume was conceived by Jiirgen Mittelstrass and Robert E Butts in 1978 Idealist philosophers are wrong about one thing the temporal gap separating idea and reality can be very long indeed even ten or so years Problems of timing were joined by personal problems and by the pressure of other professional commitments Fortunately James Brown agreed to cooperate in the editing of the volume the infusion of his usual energy good judgement and good natured promptness saved the volume and made its production possible Despite the delays the messages of the papers included in the book have not gone stale An

extremely worthwhile exercise in international philosophical cooperation has come to fruition the German constructivist philosophical position is here represented in papers in English that will make its contemporary importance available to a larger audience The editors owe thanks to many persons All involved in the project owe much to the interest and support of Nicholas Rescher a friend of the undertaking from the time of its inception My review of the translations was helped immensely by Andrea Purvis careful copy editing of the typescript Most of all however we owe gratitude and admiration for the tireless efforts on behalf of this enterprise to Jiirgen Mittelstrass

Breaking Images Brian Greer, David Kollosche, Ole Skovsmose, 2024-12-11 Mathematics is an activity something we do not just something inert that we study This rich collection begins from that premise to explore the various social influences institutional forces and lived realities that shape and mould the study and practice of mathematics and are moulded by it in turn These twenty one essays explore questions of mathematics as a topic of philosophy but also the nature and purpose of mathematics education and the role of mathematics in moulding citizens It challenges the biases and prejudices inherent within uninformed histories of mathematics including problems of white supremacy the denial of cultural difference and the global homogenization of teaching methods In particular the book contrasts the effectiveness of mathematics and science in modelling physical phenomena and solving technical problems with its ineffectiveness in modelling social phenomena and solving human problems and urges us to consider how mathematics might better meet the urgent crises of our age The book addresses anybody who is interested in reflecting on the role of mathematics in society from different perspectives It allows mathematicians to ponder about the cultural connections of mathematics and provides new perspectives for philosophical sociological and cultural studies of mathematics Because of the book's emphasis on education in mathematics it is especially interesting for mathematics teachers and teacher educators to challenge their understanding of the subject
