Advanced Ecological Theory:

Advanced Ecological Theory J. M. McGlade,1999 *Advanced Ecological Theory* J. McGlade,2009-04-01 Advanced Ecological Theory is intended for both postgraduate students and professional researchers in ecology It provides an overview of current advances in the field as well as closely related areas in evolution ecological economics and natural resource management familiarizing the reader with the mathematical computational and statistical approaches used in these different areas The book has an exciting set of diverse contributions written by leading authorities **Greening the Academy**

Samuel Fassbinder,Anthony Nocella,Richard Kahn,2012-12-30 This is the academic Age of the Neoliberal Arts Campuses as places characterized by democratic debate and controversy wide ranges of opinion typical of vibrant public spheres and service to the larger society are everywhere being creatively destroyed in order to accord with market and military models befitting the academic industrial complex While it has become increasingly clear that facilitating the sustainability movement is the great 21st century educational challenge at hand this book asserts that it is both a dangerous and criminal development today that sustainability in higher education has come to be defined by the complex friendly green campus initiatives of science technology engineering and management programs By contrast Greening the Academy Ecopedagogy Through the Liberal Arts takes the standpoints of those working for environmental and ecological justice in order to critique the unsustainable disciplinary limitations within the humanities and social sciences as well as provide tactical reconstructive openings toward an empowered liberal arts for sustainability Greening the Academy thus hopes to speak back with a collective demand that sustainability education be defined as a critical and moral vocation comprised of the diverse types of humanistic study that will benefit the well being of our emerging planetary community and its numerous common locales

Environmental Criminology Liam Leonard,2017-11-09 Using sociological criminological anthropological historical and media analysis this multi disciplinary volume examines local and regional issues in environmental criminology *Warfare Ecology* Gary E. Machlis,Thor Hanson,Zdravko Špirić,Jean E. McKendry,2011-05-29 The purpose of this book is specific and ambitious to outline the distinctive elements scope and usefulness of a new and emerging field of applied ecology named warfare ecology Based on a NATO Advanced Research Workshop held on the island of Vieques Puerto Rico the book provides both a theoretical overview of this new field and case studies that range from mercury contamination during World War I in Slovenia to the ecosystem impacts of the Palestinian occupation and from the bombing of coral reefs of Vieques to biodiversity loss due to violent conflicts in Africa Warfare Ecology also includes reprints of several classical papers that set the stage for the new synthesis described by the authors Written for environmental scientists military and humanitarian relief professionals conservation managers and graduate students in a wide range of fields Warfare Ecology is a major step forward in understanding the relationship between war and ecological systems The Gulf of Guinea Large Marine Ecosystem J.M. McGlade,P. Cury,K.A. Koranteng,N.J. Hardman-Mountford,2002-08-15 The Gulf of Guinea volume is part of a series on the

Large Marine Ecosystems This volume combines the latest research on the Gulf of Guinea from scientists working primarily in the region and from Europe It covers the dynamics of the oceanic and coastal waters of the region the major biological resources pollution in the marine environment and the socio economics and governance of marine fisheries A significant number of new data sets including some which have been repatriated from outside the region are now made available through this publication The combination of the various chapters underlines the interlinkages that exist between the interannual and seasonal dynamical behaviour of the oceanic offshore waters and the living marine resources along the coast and the direct effect they have on the livelihoods of the populations living throughout the Gulf of Guinea The volume is intended for those who have a general interest in the region as well as those who work professionally in the field It will also be of immense value to resource managers and policy makers as a demonstration project on how research can help solve the pressing problems of economic and food security in coastal regions

Niche Construction F. John Odling-Smee, Kevin N.

Lala, Marcus Feldman, 2013-02-15 The seemingly innocent observation that the activities of organisms bring about changes in environments is so obvious that it seems an unlikely focus for a new line of thinking about evolution Yet niche construction as this process of organism driven environmental modification is known has hidden complexities By transforming biotic and abiotic sources of natural selection in external environments niche construction generates feedback in evolution on a scale hitherto underestimated and in a manner that transforms the evolutionary dynamic It also plays a critical role in ecology supporting ecosystem engineering and influencing the flow of energy and nutrients through ecosystems Despite this niche construction has been given short shrift in theoretical biology in part because it cannot be fully understood within the framework of standard evolutionary theory Wedding evolution and ecology this book extends evolutionary theory by formally including niche construction and ecological inheritance as additional evolutionary processes The authors support their historic move with empirical data theoretical population genetics and conceptual models They also describe new research methods capable of testing the theory They demonstrate how their theory can resolve long standing problems in ecology particularly by advancing the sorely needed synthesis of ecology and evolution and how it offers an evolutionary basis for the human sciences Already hailed as a pioneering work by some of the world's most influential biologists this is a rare potentially field changing contribution to the biological sciences

Eco-Translatology (Hugs) Gengshen Hu, 2020-03-06 This

book offers a panoramic view of the emerging eco paradigm of Translation Studies known as Eco Translatology and presents a systematic study of the theoretical discourse from ecological perspectives in the field of Translation Studies Eco Translatology describes and interprets translation activities in terms of the ecological principles of Eco holism traditional Eastern eco wisdom and Translation as Adaptation and Selection Further Eco Translatology approaches the phenomenon of translation as a broadly conceived eco system in which the ideas of Translation as Adaptation and Selection as well as translation as a textual transplant promoting an eco balance are integrated into an all encompassing vision Lastly Eco

Translatology reinforces contextual uniqueness emphasizing the deep embeddedness of texts translations and the human agents involved in their production and reception in their own habitus It is particularly encouraging in this increasingly globalised world to see a new paradigm sourced from East Asian traditions but with universal appeal and applications and which adds to the diversity and plurality of global Translation Studies This book the first of its kind will substantially expand the horizons of Translation Studies a field that is still trying to define its own borders and will open a wealth of new possibilities Destined to become a milestone in the field of Translation Interpretation and Adaptation Studies as well as eco criticism it will introduce readers to a wholly new epistemological intervention in Translation Studies and therefore will open new vistas of thoughts discussion and criticism
