Science Teaching in Schools Great Britain: Parliament: House of Lords: Science and Technology Committee, 2006-11-05 The Committee's report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14-19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools

Current Perspectives on the Value, Teaching, Learning, and Assessment of Design in STEM Education Jeffrey Buckley, Eva Hartell, Nicolaas Blom, 2023-08-25 Design is a central activity within Science Technology Engineering and Mathematics STEM education Within enacted practice design can feature within intended learning outcomes for example in learning to design and it can feature within pedagogical methodologies for example by learning through design Often holding differing disciplinary interpretations such as design as cyclical problem solving iterative design conceptual design or design with or without make understanding the educational merits of the ill defined and open nature of authentic designerly activity is paramount This Research Topic sets out to gain a more nuanced understanding of the value and roles of design within STEM educational contexts This Research Topic focuses on design within STEM educational contexts particularly in terms of teaching learning and assessment The aim is to contribute to the evidential basis which can be used to guide the incorporation of design into educational practice The topic has two central research objectives The first is to generate evidence regarding what design is in STEM education For example is the ability to design a singular or manifold construct Is the capacity to design or are factors of this ability both learnable and teachable How transferable is designerly knowledge between contexts How do different disciplinary contexts influence the interpretation of design The second is to further our

understanding of how best to incorporate design within STEM education contexts For example how much emphasis should be placed on learning to or through design in school How should design be assessed within formal education Where and when is design best incorporated into education In posing these questions the goal of this research topic is to provide scholarly discourse which supports critical reflection and the challenging of assumptions regarding design in education Journal of Biological Education ,1991
