Advanced Nuclear Systems Consuming Excess Plutonium E.R. Merz, Carl E. Walter, 2012-12-06 A survey of recent developments in the field of plutonium disposal by the application of advanced nuclear systems both critical and subcritical Current national R D plans are summarized The actinide fuelled critical reactors are associated with control problems since they tend to have a small delayed neutron fraction coupled with a small Doppler effect and a positive void coefficient Current thinking is turning to accelerator driven subcritical systems for the transmutation of actinides The book s conclusion is that the various systems proposed are technically feasible even though not yet technically mature The book presents a unique summary and evaluation of all relevant possibilities for burning surplus plutonium presented by experts from a variety of different disciplines and interests including the defence establishment The obvious issue the non proliferation of nuclear weapons is vital but the matter represents a complex technological challenge that also requires an assessment in economic terms

Modular High-temperature Gas-cooled Reactor Power Plant Kurt Kugeler, Zuoyi Zhang, 2018-10-05 Modular High temperature Gas cooled Reactor Power Plant introduces the power plants driven by modular high temperature gas cooled reactors HTR which are characterized by their inherent safety features and high output temperatures HTRs have the potential to be adopted near demand side to supply both electricity and process heat directly replacing conventional fossil fuels The world is confronted with two dilemmas in the energy sector namely climate change and energy supply security HTRs have the potential to significantly alleviate these concerns This book will provide readers with a thorough understanding of HTRs their history principles and fields of application The book is intended for researchers and engineers involved with nuclear engineering and energy technology *Logos*, 1996

Human Factors and Design Yuri Spirochkin, 2023-02-27 This book describes various manifestations of human factors when interacting with potentially dangerous technical systems airplanes launch vehicles and spaceships nuclear power plants energy saturated ground vehicles and infrastructure facilities The idea of the book arose from the desire to find a common ground between industries that are important for safety Their similarity lies in addition to the technological advancement of products and solutions in equally high safety requirements in particular taking into account the influence of human factor Thus it is of relevance to analyze an impact of human factor in the context of safety The matter is rather complex on the one hand humans manage technical systems on the other hand human errors negligence or evil intentions can turn the system into a threat with disastrous consequences However human interaction with any technical system begins earlier in the design stage In this stage designer being creator of the system must ensure a safe operation and take into consideration possible risks including those caused by human factors itself The book is interdisciplinary in nature and intended mainly for designers of technical systems aiming to assist the specialists in understanding the issues of human participation in life cycle of these systems The examples given are intended to benefit from experiences of not one but a number of industries
