Advances in DNA Sequence-specific Agents M. Palumbo, 1997-11-19 In this volume the entire focus is devoted to the macromolecule target specificity of DNA interactive developmental therapeutic agents of current interest A brief introduction to DNA interactive anticancer agents is included for readers who may benefit from an overview surrounding the developments that have contributed to our general understanding of this field The following nine chapters have been carefully chosen so that they describe topics which are at the forefront of development in DNA targeted cancer chemotherapy Issues that have been addressed include the mechanisms of selective DNA topoisomerase I and II poisoning by antitumor agents Chapters 1 and 2 sequence specific recognition of DNA by groove binding drugs and drug conjugates Chapters 3 and 4 recent developments in nitrogen mustard alkylating agents and their potential use for antibody directed enzyme prodrug therapy Chapter 5 nonclassical platinum anticancer complexes including dinuclear and trans platinum derivatives Chapter 6 DNA cleaving antitumor chromoproteins containing reactive enediyne moieties which exhibit interesting free radical chemistry along with selective targeting Chapter 7 the potential of new sequence specific antisense and antigene therapy in oncology Chapter 8 and finally the conceivable chemotherapeutic use of mimetics of the DNA structure obtained by substitution of the sugar phosphate natural chain with a peptide backbone the so called peptide nucleic acids Chapter 9 Important approaches being currently investigated for selective cancer treatment such as gene therapy and immunochemotherapy are not discussed in this volume since they fall beyond its scope *Advances in DNA*

Sequence-Specific Agents B.J. Chapman, 2002-09-17 This series encompasses design synthesis application and analytical methods including clinical and in vitro for the study of these critical interactions As our understanding of the genome and proteome expands general developments in the field of DNA sequence specific interaction are likely to play an increasingly important role Accordingly manuscripts have been solicited from experts covering a diverse range of fields reflecting the cross disciplinary and dynamic nature of the series Volume 4 describes work on the modification of DNA by AT specific anticancer drugs DNA alkylation events which involve metabolite generation DNA sequence recognition by two selective binders bulged DNA microenvironments as molecular targets DNA sequence specific binding by short peptides and the analysis of DNA protein interactions using DNase I footprinting methodology Features include Expert contributors from the Biomedical world Emerging areas of drug design and therapeutic applications Nucleic acid protein interactions Color graphics of molecular modeling analyses New and emerging methodologies **Advances in DNA Sequence Specific**
