Synthesis of 4- to 7-membered Heterocycles by Ring Expansion Matthias D'hooghe, Hyun-Joon Ha, 2015-12-14 The series Topics in Heterocyclic Chemistry presents critical reviews on present and future trends in the research of heterocyclic compounds Overall the scope is to cover topics dealing with all areas within heterocyclic chemistry both experimental and theoretical of interest to the general heterocyclic chemistry community The series consists of topic related volumes edited by renowned editors with contributions of experts in the field All chapters from Topics in Heterocyclic Chemistry are published Online First with an individual DOI In references Topics in Heterocyclic Chemistry is abbreviated as Top Heterocycl Chem and cited as a journal

Acetylene Chemistry François Diederich, Peter J. Stang, Rik R. Tykwinski, 2006-03-06 Acetylenes are an important and valuable class of compounds in organic synthesis This book expands on this historically well established concept while incorporating the many new developments that have widened the number of applications in this field It remains the only handbook available that embodies all the important facets of acetylene chemistry Following the first section on synthesis the leading authors deal with advanced materials before turning to the properties and theory of acetylenes while a final section looks at the biological aspects With its range of experimental procedures this book is a practical aid for both organic and organometallic chemists as well as for materials scientists biochemists and industrial chemists

Advances in Strained and Interesting Organic Molecules B. Halton, 1999-12-27 The eighth volume of this series comprises six chapters and describes a variety of interesting strained and not so strained molecules and their use or abuse in the widest sense This volume contains a position summary of planar carbon networks the field of strained allenes addressed by considering the five to nine membered ring derivatives and this is followed by an introduction to the nature of carbene geometry and the use of ESR spectroscopy in deducing carbene structure The use of strained molecules in the synthesis of important new compounds of a natural and non natural nature is a main theme in the volume Other areas that are discussed are strained carbohydrates stereocontrolled access to natural products and polymer systems as well as a much sought after contribution to the series on small ring nitrogen heterocycles
