web transcription is an essential step in using the information from genes in our dna to make proteins proteins are the key molecules that give cells structure and keep them running blocking transcription with mushroom toxin causes liver failure and death because no new rnas and thus no new proteins can be made 2

web genes encode proteins and the instructions for making proteins are decoded in two steps first a messenger rna mrna molecule is produced through the transcription of dna and next the mrna

web proteins and of rna molecules involved in protein synthesis gene expression the process by which dna directs protein synthesis includes two stages called transcription and translation concept 17 1 genes specify proteins via transcription and translation the study of metabolic defects provided evidence that genes specify proteins
