broad and highly significant subject of computer aided and integrated manufacturing systems It is a set of distinctly titled  
and well harmonized volumes by leading experts on the international scene The techniques and technologies used in  
computer aided and integrated manufacturing systems have produced and will no doubt continue to produce major annual  
improvements in productivity which is defined as the goods and services produced from each hour of work This publication  
deals particularly with more effective utilization of labor and capital especially information technology systems Together the

Computer Aided Design* Susan Finger,Tetsuo Tomiyama,Martti Mäntylä,2013-03-09 Computer Aided Design CAD technology  
plays a key role in today s advanced manufacturing environment To reduce the time to market achieve zero defect quality the  
at first production and use available production and logistics resources effectively product and design process knowledge  
covering the whole product life cycle must be used throughout product design Once generated this intensive design  
knowledge should be made available to later life cycle activities Due to the increasing concern about global environmental  
issues and rapidly changing economical situation worldwide design must exhibit high performance not only in quality and  
productivity but also in life cycle issues including extended producer s liability This requires designers and engineers to use  
various kinds of design knowledge intensively during product design and to generate design information for use in later  
stages of the product life cycle such as production distribution operation maintenance reclamation and recycling Therefore  
future CAD systems must incorporate product and design process knowledge which is not explicitly dealt with in the current  
systems in their design tools and design object models      Computer Aided And Integrated Manufacturing Systems (A
