Calcium In Muscle Contraction Cellular And Molecular Physiology:

Calcium in Muscle Contraction Johann C. Rüegg, 2012-12-06 Recent years have witnessed an explosion of knowledge leading to a molecular understanding of the mechanisms of action of calcium on excitation and contraction coupling and its role in the regulation of contractility This book highlights the most recent progress as well as providing a historical perspective of the field It presents a concise and comprehensive overview of our current knowledge regarding calcium channels and regulatory proteins as well as intracellular calcium handling and the mechanisms underlying the activation of contractile proteins It also describes how these basic mechanisms have been adapted in various types of muscle especially in cardiac and smooth muscle

Current Methods in Muscle Physiology Sugi Haruo, Haruo Sugi, 1998 Despite extensive physiological biochemical and structural studies the mechanisms of muscle contraction operating in living muscle fibres are still not clearly understood This book aims to describe and assess various experimental methods currently used in the field of muscle research For each method discussed there is a comprehensive description of its advantages problems and limitations Each chapter also contains a summary of the central results to have been obtained using each method Comprehensively written by experts in their respective fields this book will be of interest to all investigators in muscle physiology

Subject Guide to Books in Print, 2001 Calcium and Cell Physiology D. Marme, 2012-12-06 The purpose of the present volume is to give a comprehensive and up to date survey of the nature and role of calcium ions Ca in the regulation of cellular function Since Ca has gained in interest over the past years as a cellular messenger in signal transduction and since the discovery of its cellular receptor protein calmodulin has helped in understanding its mode of action in molecular terms we felt that an interdisciplinary selection of topics from the calcium field could provide a good source of information for all those interested in calcium mediated physiology The volume begins with an overview on the synergistic nature of the two cellular messengers cyclic AMP and Ca The next three chapters deal with the various transport mechanisms for Ca The biochemistry and molecular biology of calmodulin as well as the cellular localization of calmodulin and calmodulin binding proteins are reviewed Calcium regulation of smooth muscle contraction introduces the pharmacology of calcium

antagonists Molecular and Cellular Aspects of Muscle Contraction Haruo Sugi,2003 This volume presents the proceedings of a muscle symposium which was held as the Fourth Fujihara seminar on October 28 November 1 2002 at Hakone Japan This volume covers all fields of muscle biology from molecules to humans This book provides information about recent progress of muscle research as well as the problems that remain to be investigated This volume will stimulate muscle investigators to design and perform novel experiments to clarify the mysteries in muscle contraction **Muscle Contraction and Cell Motility** H. Sugi,2012-12-06 This volume intends to provide a comprehensive overview on the mechanisms of muscle contraction and non muscle cell motility at the molecular and cellular level not only for investigators in these fields but also for general readers interested in these topics A most attractive feature of various living organisms in the animal and plant kingdoms is their ability to move In spite of a great diversity in the structure and function of various motile systems it has frequently been assumed since the nineteenth century that all kinds of motility are essentially the same Based on this assumption some investigators in the nineteenth century thought that the mechanisms of motility could better be studied on primitive non muscle motile systems such as amoeboid movement rather than on highly specialized muscle cells Contrary to their expectation however the basic mechanisms of motility have been revealed solely by investigations on vertebrate skeletal muscles since a monumental discovery of Szent Gyorgyi and his coworkers in the early 1940s that muscle contraction results from the interaction between two different contractile proteins actin and myosin coupled with ATP hydrolysis **Reproductive Biomechanics, Volume 1101** David Elad,Roger C. Young,New York Academy of Sciences,2007-05-07 The reproductive system is composed of complex sub systems which are driven by sophisticated biochemical processes whereas their performance is controlled by the same physical laws that exist in any mechanical process on Earth e g Newton s laws Accordingly the understanding of any physiological phenomenon including the development of a pathologic condition requires comprehensive evaluation of the biophysical and biomechanical aspects of reproduction in concert with the biological and clinical features Several of the scientists from around the world who investigate the physical aspects of the reproductive system have contributed to the eight sessions resulting in this volume These reports encompass the following areas of inquiry non pregnant uterine peristalsis placental vasculature and blood flow myometrial contractility and calcium transport mechanics of the uterus and cervix in pregnancy mechanics of embryonic development penile mechanics and hemodynamics sperm propulsion and pelvic floor mechanics NOTE Annals volumes are available for sale as individual books or as a journal For information on institutional journal subscriptions please visit www.blackwellpublishing.com **nyas ACADEMY MEMBERS** Please contact the New York Academy of Sciences directly to place your order www.nyas.org Members of the New York Academy of Science receive full text access to the Annals online and discounts on print volumes Please visit www.nyas.org/membership/main.asp for more information about becoming a member *Annals of the New York Academy of Sciences* Thomas Lincoln Casey,Gilbert Van Ingen,Charles Lane Poor,Edmund Otis
