On Astrocytes and Glutamate Neurotransmission Elisabeth Hansson, Torsten Olsson, 1997-06-15 **Cell Signalling**

John T. Hancock, 2017 Signaling within and between cells is one of the most important aspects of modern biochemistry and cell biology. An understanding of signalling pathways is vital to a wide range of biologists, from those who are investigating the causes of cancer to those who are concerned about the impact of environmental pollutants on the ecosystem. The way cells adapt to changing environments and the way cell dysfunction causes disease is underpinned by cell signalling events. *Cell Signalling* presents a carefully structured and highly accessible introduction to this intricate and rapidly growing field. Starting with an overview of cell signalling and highlighting its importance in many biological systems, the book goes on to explore the key components of extracellular and intracellular signalling mechanisms before examining how these components come together to create signalling pathways. A focus on common components and concepts rather than mechanistic detail allows the reader to gain a thorough understanding of the principles that underpin cell signalling.

Quantitative Physiology Shangbin Chen, Alexey Zaikin, 2021-02-09
Stephen Hawking says that the 21st century will be the century of complexity and indeed now systems biology or medicine means dealing with complexity. Both the genome and the proteome have emerged in studying complex physiological systems. Computational and mathematical modeling has been regarded as an efficient tool to boost the understanding about living systems in normal or pathophysiological states. Covering applied methodology, basic case studies and complex applications, this volume provides researchers with an overview of modeling and computational studies of physiology. *Quantitative Physiology* is becoming an increasingly important branch of systems biology. This book aims to build multi-scale models to investigate functions in living systems and explain how biomolecules, cells, organs, organ systems and organisms carry out the chemical or physical functions. Some of the models addressed are related to gene expression, calcium signalling, neural activity, blood dynamics and bone mechanics. Combining theory and practice with extensive use of MATLAB, this book is designed to establish a paradigm for quantitative physiology by integrating biology, mathematics, physics and informatics, etc. To benefit from this book, the readers are expected to have a background in general physiology and mathematics.

Intracellular Messengers C.M. Taylor, 2012-12-02
This important new reference work offers an outstanding collection of articles devoted to the discussion of intracellular messengers. Extracellular stimuli first messengers bind to receptors on the plasma membrane of cells to trigger changes in the concentration of intracellular messengers, second messengers, which leads in turn to changes in cellular activity. However, the intracellular activities of so-called third messengers may also be involved, complicating the concept of a rigid sequence of events between receptor and response. The

preference for the term intracellular messengers and hence the title of this volume recognizes that a complex web of interactions between intercellular messengers determines the concentrations and ultimate effects of each The Oscillating Response to the Purine Nucleotide GTP in Paramecium Tetraurelia John Lee Mimikakis,1997 *The Journal of Cell Biology*,2002 No 2 pt 2 of November issue each year from v 19 1963 47 1970 and v 55 1972 contain the Abstracts of papers presented at the Annual Meeting of the American Society for Cell Biology 3d 1963 10th 1970 and 12th 1972 *Journal of Cell Science* ,2003 **Environmental Physiology** A.
