Making the Connection Marilyn Paula Carlson,Chris Rasmussen,2008 The chapters in this volume convey insights from mathematics education research that have direct implications for anyone interested in improving teaching and learning in undergraduate mathematics This synthesis of research on learning and teaching mathematics provides relevant information for any math department or individual faculty member who is working to improve introductory proof courses the longitudinal coherence of precalculus through differential equations students mathematical thinking and problem solving abilities and

students understanding of fundamental ideas such as variable and rate of change Other chapters include information about programs that have been successful in supporting students continued study of mathematics The authors provide many examples and ideas to help the reader infuse the knowledge from mathematics education research into mathematics teaching practice University mathematicians and community college faculty spend much of their time engaged in work to improve their teaching Frequently they are left to their own experiences and informal conversations with colleagues to develop new approaches to support student learning and their continuation in mathematics Over the past 30 years research in undergraduate mathematics education has produced knowledge about the development of mathematical understandings and models for supporting students mathematical learning Currently very little of this knowledge is affecting teaching practice We hope that this volume will open a meaningful dialogue between researchers and practitioners toward the goal of realizing improvements in undergraduate mathematics curriculum and instruction

Incorporating the Human Element in Online Teaching and Learning Gray, Laura E.,Dunn, Shernette D.,2024-03-25 The rapid shift to online learning accelerated by the challenges of the COVID 19 pandemic has brought both convenience and unforeseen hurdles Despite the appeal of flexible education the attrition rates in online courses remain persistently higher than in traditional face to face counterparts This escalating issue impacts individual students and threatens the stability of entire learning institutions The imminent need for a comprehensive solution to address the root causes of high attrition rates has never been more critical Incorporating the Human Element in Online Teaching and Learning meticulously crafted for college professors researchers graduate students policymakers instructional designers and college administrators provides a comprehensive roadmap for mitigating the attrition crisis in online education The book equips educators with culturally responsive pedagogical practices by addressing the critical need for humanistic engagement in online courses ensuring that online learning spaces become more inclusive and supportive As a result the strategies outlined in this book empower educators to create a sense of belonging for diverse student populations and offer a blueprint for colleges and universities to foster professional development opportunities Ultimately this transformative guide is a cornerstone in reshaping the online learning experience ensuring that every student regardless of background can thrive in the digital classroom

Research and Development in University Mathematics Education Viviane Durand-Guerrier,Reinhard Hochmuth,Elena Nardi,Carl Winsløw,2021-04-15 In the last thirty years or so the need to address the challenges of teaching and learning mathematics at university level has become increasingly appreciated by university mathematics teachers and beyond by educational institutions around the world Indeed mathematics is both a condition and an obstacle to success for students in many educational programmes vital to the 21st century knowledge society for example in pure and applied mathematics engineering natural sciences technology economics finance management and so on This breadth of impact of mathematics implies the urgency of developing research in university mathematics education and of sharing results of this research widely This book provides a bespoke opportunity

for an international audience of researchers in didactics of mathematics mathematicians and any teacher or researcher with an interest in this area to be informed about state of the art developments and to heed future research agendas This book emerged from the activities of the research project INDRUM acronym for International Network for Didactic Research in University Mathematics which aims to contribute to the development of research in didactics of mathematics at all levels of tertiary education with a particular concern for the development of early career researchers in the field and for dialogue with university mathematicians The aim of the book is to provide a deep synthesis of the research field as it appears through two INDRUM conferences organised in 2016 and 2018 It is an original contribution which highlights key research perspectives addresses seminal theoretical and methodological issues and reports substantial results concerning the teaching and learning of mathematics at university level including the teaching and learning of specific topics in advanced mathematics across a wide range of university programmes
