Configuration Spaces Over Hilbert Schemes And Applications:

Configuration Spaces over Hilbert Schemes and Applications Danielle Dias,Patrick Le Barz,2006-11-14 The main themes of this book are to establish the triple formula without any hypotheses on the genericity of the morphism and to develop a theory of complete quadruple points which is a first step towards proving the quadruple point formula under less restrictive hypotheses This book should be of interest to graduate students and researchers in the field of algebraic geometry The reader is expected to have some basic knowledge of enumerative algebraic geometry and pointwise Hilbert schemes

The Global Theory of Minimal Surfaces in Flat Spaces William Meeks,A. Ros,H. Rosenberg,2002-03-25 In the second half of the twentieth century the global theory of minimal surface in flat space had an unexpected and rapid blossoming Some of the classical problems were solved and new classes of minimal surfaces found Minimal surfaces are now studied from several different viewpoints using methods and techniques from analysis real and complex topology and geometry In this lecture course Meeks Ros and Rosenberg three of the main architects of the modern edifice present some of the more recent methods and developments of the theory The topics include moduli asymptotic geometry and surfaces of constant mean curvature in the hyperbolic space

manufacturing of composite materials the espresso coffee brewing process the filtration of liquids through diapers various questions about flow problems in oil reservoirs and the theory of homogenization The aim is to show that filtration problems arising in very practical industrial context exhibit interesting and highly nontrivial mathematical aspects Thus the style of the book is mathematically rigorous but specifically oriented towards applications so that it is intended for both applied mathematicians and researchers in various areas of technological interest The reader is required to have a good knowledge of the classical theory of PDE and basic functional analysis

Seminaire de Probabilites XXXIII J. Azema, M. Emery, M. Ledoux, M. Yor, 2006-11-14 Besides topics traditionally found in the Sminaire de Probabilits Martingale Theory Stochastic Processes questions of general interest in Probability Theory this volume XXXIII presents nine contributions to the study of filtrations up to isomorphism It also contains three graduate courses Dynamics of stochastic algorithms by M Benaim Simulated annealing algorithms and Markov chains with rare transitions by O Catoni and Concentration of measure and logarithmic Sobolev inequalities by M Ledoux These up to date courses present the state of the art in three matters of interest to students in theoretical or applied Probability Theory and to researchers as well

Calculus of Variations and Geometric Evolution Problems F. Bethuel, G. Huisken, S. Mueller, K. Steffen, 1999-10-19 The international summer school on Calculus of Variations and Geometric Evolution Problems was held at Cetraro Italy 1996 The contributions to this volume reflect quite closely the lectures given at Cetraro which have provided an image of a fairly broad field in analysis where in recent years we have seen many important contributions Among the topics treated in the courses were variational methods for Ginzburg Landau equations variational models for microstructure and phase transitions a variational treatment of the Plateau problem for surfaces of prescribed mean curvature in Riemannian manifolds both from the classical point of view and in the setting of geometric measure theory

Arithmetic Theory of Elliptic Curves J. Coates, R. Greenberg, K.A. Ribet, K. Rubin, 1999-10-19 This volume contains the expanded versions of the lectures given by the authors at the C I M E instructional conference held in Cetraro Italy from July 12 to 19 1997 The papers collected here are broad surveys of the current research in the arithmetic of elliptic curves and also contain several new results which cannot be found elsewhere in the literature Owing to clarity and elegance of exposition and to the background material explicitly included in the text or quoted in the references the volume is well suited to research students as well as to senior mathematicians

Ecole D'ete de Probabilites de Saint-Flour J. Bertoin, F. Martinelli, Y. Peres, Saint-Flour Summer School of Probability Theory, 1999-11-17 Lecture Notes in Mathematics This series reports on new developments in mathematical research and teaching quickly informally and at a high level The type of material considered for publication includes 1 Research monographs 2 Lectures on a new field or presentations of a new angle in a classical field 3 Summer schools and intensive courses on topics of current research Texts which are out of print but still in demand may also be considered The timeliness of a manuscript is sometimes more important than its form which might be preliminary or tentative Details of the editorial

Geometric Mechanics Waldyr M. Oliva, 2002-10-23 Geometric Mechanics here means mechanics on a pseudo riemannian manifold and the main goal is the study of some mechanical models and concepts with emphasis on the intrinsic and geometric aspects arising in classical problems The first seven chapters are written in the spirit of Newtonian Mechanics while the last two ones as well as two of the four appendices describe the foundations and some aspects of Special and General Relativity All the material has a coordinate free presentation but for the sake of motivation many examples and exercises are included in order to exhibit the desirable flavor of physical applications

Schubert Varieties and Degeneracy Loci William Fulton, Piotr Pragacz, 1998-07-16 Schubert varieties and degeneracy loci have a long history in mathematics starting from questions about loci of matrices with given ranks These notes from a summer school in Thurnau aim to give an introduction to these topics and to describe recent progress on these problems There are interesting interactions with the algebra of symmetric functions and combinatorics as well as the geometry of flag manifolds and intersection theory and algebraic geometry

Green Functors and G-sets Serge Bouc, 1997-10-10 This book provides a definition of Green functors for a finite group G and of modules over it in terms of the category of finite G sets Some classical constructions such as the associated category or algebra have a natural interpretation in that framework Many notions of ring theory can be extended to Green functors opposite Green functor bimodules Morita theory simple modules centres There are moreover connections between Green functors for different

groups given by functors associated to bisets Intended for researchers and students in representation theory of finite groups it requires only basic algebra and category theory though knowledge of the classical examples of Mackey functors is probably preferable
