Conflict-Controlled Processes A. Chikrii, 2013-03-14 This monograph covers one of the divisions of mathematical theory of control which examines moving objects functioning under conflict and uncertainty conditions To identify this range of problems we use the term conflict controlled processes coined in recent years As the name itself does not imply the type of dynamics difference ordinary differential difference differential integral or partial differential equations the differential games fall within its realms The problems of search and tracking moving objects are also referred to the field of conflict controlled process The contents of the monograph is confined to studying classical pursuit evasion problems which are central to the theory of conflict controlled processes These problems underlie the theory and are of considerable interest to researchers up to now It should be noted that the methods of Line of Sight Parallel Pursuit Proportional Navigation Modified Pursuit and others have been long and well known among engineers engaged in design of rocket and space technology An abstract theory of dynamic game problems in its turn is based on the methods originated by R Isaacs L S Pontryagin and N N Krasovskii and on the approaches developed around these methods At the heart of the book is the Method of Resolving Functions which was realized within the class of quasistrategies for pursuers and then applied to the solution of the problems of hand to hand group and successive pursuit
