Consciousness And Reality:

Radical Transformation Imants Barušs, 2021-01-28 In *Radical Transformation* Imants Barušs leads the reader out of the receding materialist paradigm into an emerging post materialist landscape in which new questions present themselves If consciousness has nonlocal properties then how are boundaries between events established If consciousness directly modulates physical manifestation then what is the scope of such modulation If consciousness continues after physical death then how much interference is there from non physical entities As we face the threat of extinction on this planet is there anything in recent consciousness research that can help us Are there effective means of self transformation that can be used to enter persistent transcendent states of consciousness that could resolve existential and global crises The author leads the reader through discussions of meaning radical transformation and subtle activism revealing the unexpected interplay of consciousness and reality along the way

The Nature of Consciousness, the Structure of Reality Jerry Davidson Wheatley, 2001 This book describes how understanding the structure of reality leads to the Theory of Everything Equation The equation unifies the forces of nature and enables the merging of relativity with quantum theory The book explains the big bang theory and everything else

How Consciousness Creates Reality Claus Janew, 2022-06-26 What if our consciousness were not just a passive observer but an active participant in creating the very fabric of reality Claus Janew presents a thought provoking synthesis of systems theory esoteric wisdom and philosophical insight painting a picture of reality in which every conscious being plays a crucial role Dive deep into the concept of the reality funnel a dynamic interface where our individual choices and perceptions intertwine to shape the collective tapestry of existence Discover how the apparent solidity of the physical world emerges from an ocean of potentiality and how our thoughts emotions and actions ripple through space and time influencing the unfolding of All That Is Blending the mystical with the scientific the personal with the universal this book offers a framework for understanding consciousness that transcends the boundaries of traditional paradigms It invites you to embrace your role as a co creator of reality and to awaken to the awesome possibilities that lie at the core of your being Whether you re a seeker of spiritual growth a student of the nature of reality or simply curious about the deeper mysteries of existence *How Consciousness Creates Reality* will transform your understanding of yourself and your place in the cosmos

Perceptions of Reality Gregory Calise, 2003 Although we are all living in the same world we are simultaneously each living in our own separate universe where each person observes himself as the center of that universe Each person has a unique conditioning and belief structure that create his perspective in which he views reality The world then interfaces with each person to create a reality that conforms to his beliefs A person's conditioning and beliefs affect his attitudes and emotions which then magnetize certain energies that resonate to his state of being In this way each individual is creating a separate reality according to his perceptions of truth What we perceive as reality is only the surface of a much deeper and greater truth Beyond the apparent

world lies the essence of life and a vast kingdom of hidden knowledge Our conditioning and beliefs bind us to a certain perspective in which we view our reality Perceptions of Reality show us how we can break free of the bondage of our conditioning that holds us in a life of mediocrity When we become free from this bondage we can change our perspective which in turn changes our perceptions From a higher perspective we can see the larger picture of our lives and the world We will see the circumstances that have created our present reality and the relationships of events and experiences that were previously beyond our horizons of perception From this higher perspective we will perceive the world in a new light It will change before our eyes and interface with us in a new and more positive way We will be able to take control of our lives change our destiny and shape a new future From this higher state of awareness we will discover the portal to access the abstract mind which is the mental function of genius and the doorway to revelation From the perspective of revelation we will open the doors into the absolute realms beyond material time and space and describes the perceptions of God the soul the world and the paths to higher consciousness Perceptions of Reality will show us how to access the abstract mind and open the doorways into revelation creating a new reality full of abundance harmony and joy

McHenry,2013-05-02 Timothy Sprigge has been a major player on the philosophical scene contributing to discussions as diverse as consciousness the ontology of time personal identity animal rights punishment censorship and wider issues in metaphysics ethics and the history of philosophy He is however less well known for his own highly original system of metaphysics and ethics a synthesis of Absolute Idealism panpsychism and utilitarianism The contributions gathered in this volume written by philosophers of international reputation or by acknowledged scholars in their specialized fields of inquiry engage themes in his metaphysics and ethics and provide a critical assessment of his ideas and arguments In a concluding essay Sprigge answers the most significant objections raised by his critics the final result is an engaging dialogue on the perennial and most fundamental questions of philosophy

Embry,2011-05-16 The work of renowned thinker Eric Voegelin is largely rooted in his literary sensibility Voegelin s contributions to the field of philosophy grew from the depths of his knowledge of history s most important texts from ancient to modern times Many of the concepts he emphasized such as participatory experience and symbolization in philosophy have long been significant to literary criticism as well as philosophical study Voegelin himself even ventured into the field of criticism publishing a critical examination of Henry James s *The Turn of the Screw* in 1971 Since it is so strongly influenced by the written record of man s search for meaning Voegelinian thought makes an ideal framework for the study of twentieth century literature For Voegelinian Readings of Modern Literature scholar Charles R Embry has collected essays that consider particular pieces of literature in light of the philosopher s work These essays supply a theoretical grounding for the reading of novels poems and plays and reveal how the Voegelinian perspective exposes the existential and philosophical dimensions of the literary works themselves As a unit this collection of essays shows how modern pieces of literature can symbolize their creators participation in the human search for the truth of existence just as myths philosophical works and religious texts always have Voegelin s primary concern as a philosopher was to expose the roots of the disturbances of the modern era religious conflict imperialism war so that the sources of order leading to meaning are revealed The openness of Voegelinian thought and the many ways he considered the levels of reality generate intriguing themes for literary criticism In these essays noted Voegelin scholars focus on American and European literary artists from the 1700s through the late twentieth century including Emily Dickinson Henrik Ibsen Thomas Carlyle D H Lawrence Marcel Proust and Hermann Broch While the intersection of the work of Eric Voegelin and literature has been a part of Voegelin scholarship for decades this book explores that relationship in an extended form Through a broad collection of thoughtful essays Voegelinian Readings of Modern Literature reveals how much Voegelin did to break down the barriers between literature and philosophy and makes an engaging contribution to Voegelin scholarship *The Nature of Experience* W. H. Sparks,2011-11-23 This study identifies the structures and processes that create consciousness and the conscious experience The expression of perceptions memories dreams and emotions develop and are enhanced in intrafusal muscle spindles These expressions in many cases are common to us all We experience the environment as reality in the form of sensations sight hearing taste smell and touch to use the common and traditional identifications Consciousness is experienced in the intrafusal muscle spindles The fundamental purpose of the spindles is to

control the muscular system The process of control is the detection of the energy by a second set of receptors the spindle receptors The second set of receptors is critical to an explanation of the theory and serves to explain what heretofore has been the unknown factor in conscious experience the experience of consciousness The spindle receptor detection is analogous to the detection of the environment by sensory receptors The difference of course is that we are the intrafusal spindles detected by the spindle receptors It is the efferent impulse activity from the congenitally and experientially configured synaptic activity that enhances the energies developed in the spindles as experience This process is necessary for the experience of consciousness and the effective control of behavior For centuries man has reflected upon the conscious nature of the human species The Nature of Experience offers a new perspective on this eternal question *Edge of Reality* William Thomas,2017-11-15 This book contains a discussion with a new perspective on the old string theory problems With respect to where all those extra dimensions are we need to make the theory work mathematically It has been said by many scientists that we may need to look at the string theory problem with a fresh perspective or find new ways of thinking to resolve its challenges Lets have a little fun with open minds and a new way of looking into reality with our imaginations turned on as we discuss possible new solutions to resolving the string theory challenges Exercising the mind is one way to look into things that are out of the reach of direct experimentation Einstein utilized the thought experiments to revolutionize modern physics by means of imagination insight and logic This discussion proceeds in a language that anyone can follow regardless of background This is an intuitive discussion with respect to known and accepted foundational science principles focused on solving the string theory challenges *The Meaning of the Terms: 'existence' and 'reality'* Alvin Thalheimer,1920
