Conservation Chemistry An Introduction:

Conservation Chemistry Ted Lister, Janet Renshaw, 2004 This book is divided into three sections dealing with the conservation of plastics stone and wood It provides teaching and learning materials that deal with familiar chemistry in an unfamiliar context it also helps to show how the chemical sciences play a part in many unexpected areas of life Many people think of objects made of plastic as throwaway and do not consider them as collectable items or ones that might be found in museums In fact there are increasing numbers of plastic objects in museums as well as in private collections and many are increasing in value To give just one example some Barbi TM dolls can change hands for thousands of pounds it is also a misconception that plastics do not decay easily many of them do and this raises issues about how best to preserve them This section is set in a context of the collection care identification and display of objects in museums and by private collectors The section on stone focuses on a case study In order to prevent damage to a stone object conservation scientists sometimes surround the object with filter paper soaked in pure water This is called poulticing Conservation scientists at the British Museum wanted to investigate the poulticing process to see how effective it was at removing salts and to find out whether previous treatment of the stone affected the efficiency of the removal process The section on wood focuses on the Mary Rose a wooden Tudor warship that sank off Portsmouth in 1545 In 1982 the hull was raised and since then has been undergoing conservation treatment in a former dry dock at Portsmouth Over 19 000 artefacts were recovered The material processed here looks at the chemistry of the decay processes and the methods used to conserve the wood of the Mary Rose s hull and some of the other materials involved

Introduction to General Inorganic Chemistry Alexander Smith,1906 **Chemicals and Methods for Conservation and Restoration** Johannes Karl Fink,2017-06-15 Before the 1970s most information concerning the conservation and restoration of paintings wood and archaeological artefacts were focused on the history of the artefacts previous attempts of conservation and the future use of these artefacts The technical methods of how the restoration and conservation were made were dealt with only very briefly Today sophisticated methods of scientific analysis such as DNA are common place and this encourages conservators and scientists to work together to work out the development of new methods for analysis and conservation of artefacts This book focuses on the chemicals used for conservation and restoration of various artefacts in artwork and archaeology as well as special applications of these materials Also the methods used both methods for cleaning conservation and restoration as well as methods for the analysis of the state of the respective artefacts Topics include oil paintings paper conservation textiles and dyes for them archaeological wood fossils stones metals and metallic coins and glasses including church windows The School of Mines Quarterly ,1891 *An Introduction to Materials and Chemistry* Joyce H.
