Advances in Polymers for Biomedical Applications Deepak Pathania, Bhuvanesh Gupta, 2018 Polymers have generated considerable interest in a large number of technologically important fields such as human healthcare systems Polymers represent a very important domain of materials and have become an integral part of day to day human life Polymers exist in nature they have been and continue to be an integral part of the universe This book is intended for scientists and researchers to use in their research or in their professional practice in polymer chemistry and its biomedical applications Multiple biological synthetic and hybrid polymers are used for multiple medical applications A wide range of different polymers are available and they have the advantage to be tunable in physical chemical and biological properties and in a wide range to match the requirements of specific applications This book gives a brief overview about the introduction and developments of polymers for different applications The biomedical polymers comprise not only bulk materials but also coatings and pharmaceutical nano carriers for drugs The surface modification of the inorganic nanoparticles with a physically or chemically end tethered polymer chain has been employed to overcome the problems associated with the polymers Chemically attached polymer chains not only stabilize the inorganic nanoparticles but also lead to photosensitivity bioactivity biocompatibility and pharmacological properties in the composites Polymer encapsulated silica nanocomposites mesoporous have potential applications in different fields such as optics bio catalysis microelectronics bone tissue engineering coatings cosmetics inks agriculture drug release systems diagnoses enzyme imaging temperature responsive materials and thermosensitive vehicles for cellular imaging Polymer grafted nanosized particles are known to have excellent properties such as good dispersion ability in solvents and polymer matrices Polymer based controlled drug delivery systems have some specific advantages such as improved efficiency and reduced toxicity The incorporation of a thermoresponsive polymer layer often enhances protein absorption and specific biomolecular tagging through hydrogen bonding As a result the nanocomposite gets cleared from the body at a faster rate blood residence becomes low This book is composed of fourteen edited chapters it is intended for scientists and researchers to use in their research or in their professional practice in polymer chemistry and its biomedical applications

Biotechnology and Polymers C.G. Gebelein, 2012-12-06 The term biotechnology has emerged on the contemporary scene fairly recently but the basic concept of utilizing natural materials either directly or in modified versions dates back to antiquity If we search the ancient literature

such as the Bible we find hundreds of examples wherein people employed or modified natural materials for a variety of important uses As far back as the days of Noah we find pitch a natural material being used as a caulk Clothing was made from animal skins and the products of several plants Today we would consider these things as important biotechnological developments Likewise the human use of polymeric materials also has a long history In fact many of the original materials used by mankind were polymers derived from nature such as wood flax cotton wool and animal skins which were used for shelter and clothing In recent years however the concept of biotechnology has taken on a new and renewed role in our society This is due to a combination of factors including an increased interest in environmental concerns and the desire to break free from the stranglehold that petrochemicals have placed on our society If we can manufacture some of our polymers from renewable resources then we can expect to prepare them for many more years into the future than we might if we could only depend on the petrochemical resources

Progress in Biomedical Polymers Charles G. Gebelein, Richard L. Dunn, 2013-06-13

Cosmetic and Pharmaceutical Applications of Polymers T. Cheng, C.G. Gebelein, Victor C. Yang, 2012-12-06

Polymers continue to show almost amazing versatility We have always known that polymers could be used for trinkets toys and dishes Now however we are no longer surprised to encounter these adaptable materials in almost every place we look We find them in our cars tools electronic devices building materials etc The use of polymeric materials in medicine is also well documented in previous books by one of the Editors Gebelein and by others Likewise the use of polymeric materials in pharmaceutical applications especially in controlled release systems is also well established Nevertheless the use of these ubiquitous chemicals is far less obvious in the field of cosmetics although modern cosmetic preparations rely heavily on polymers and this trend is certain to increase This book brings together much of the basic information on polymers in cosmetics and compares this usage with similar applications in pharmaceutical and medical applications Cosmetics like medicine and pharmacy dates back to antiquity We can find uses of perfumes balms and ointments in various old books such as the Bible For example the use of ointments and balms is noted more than thirty eight times and perfumes and related materials are cited at least twenty nine times in the Bible

Industrial Biotechnological Polymers Charles Gebelein, Charles E. Carraher Jr., 1995-10-10 From the Preface This book attempts to delineate some of the more recent efforts at utilizing biotechnology in industry For convenience this book is divided into the following five sections 1 Industrial Applications 2 Polysaccharides and Lignins 3 Spider Silks 4 Protein Based Systems and 5 Miscellaneous Biotechnological Polymers The division is intended for the convenience of the reader and not to depict any basic demarcation in biotechnology which already spans much of our modern technology and appears poised to embark on a course aimed at extending its boundaries even further One of the newest trends in science is the mimicking of nature using solutions provided in nature such as elasticity to produce materials with distinctive properties The papers in this book are extensions of presentations given March 15 16 1994 in San Diego at the 207th National Meeting of the American Chemical Society during a symposium on Industrial Biotechnological Polymers This symposium was sponsored by the Biotechnology Secretariat and cosponsored by the A C S Division of Polymeric Materials Science and Engineering The editors believe this book will make a lasting contribution to the field of biotechnological polymers
