Advances In High Performance Computing:

Advances in High Performance Computing Lucio Grandinetti, J.S. Kowalik, Marián Vajtersic, 2012-12-06 Most of the papers in this volume were presented at the NATO Advanced Research Workshop High Performance Computing Technology and Application held in Cetraro Italy from 24 to 26 of June 1996 The main purpose of the Workshop was to discuss some key scientific and technological developments in high performance computing identify significant trends and define desirable research objectives The volume structure corresponds in general to the outline of the workshop technical agenda general concepts and emerging systems software technology algorithms and applications One of the Workshop innovations was an effort to extend slightly the scope of the meeting from scientific engineering computing to enterprise wide computing The papers on performance and scalability of database servers and Oracle DBMS reflect this attempt We hope that after reading this collection of papers the readers will have a good idea about some important research and technological issues in high performance computing We wish to give our thanks to the NATO Scientific and Environmental Affairs Division for being the principal sponsor for the Workshop Also we are pleased to acknowledge other institutions and companies that supported the Workshop European Union European Commission DGIII Industry CNR National Research Council of Italy University of Calabria Alenia Spazio Centro Italiano Ricerche Aerospaziali ENEA Italian National Agency for New Technology Energy and the Environment Fujitsu Hewlett Packard Convex Hitachi NEC Oracle and Silicon Graphics Cray Research Editors January 1997 vii LIST OF CONTRIBUTORS Ecole Normale Supérieure de Lyon 69364 Abarbanel Robert M *Advances in Computers* Marvin Zelkowitz, 2009-06-12 This is volume 72 of *Advances in Computers* a series that began back in 1960 and is the oldest continuing series chronicling the ever changing landscape of information technology Each year three volumes are produced which present approximately 20 chapters that describe the latest technology in the use of computers today In this volume 72 we present the current status in the development of a new generation of high performance computers The computer today has become ubiquitous with millions of machines being sold and discarded annually Powerful machines are produced for only a few hundred U S dollars and one of the problems faced by vendors of these machines is that due to the continuing adherence to Moore's law where the speed of such machines doubles about every 18 months we typically have more than enough computer power for our needs for word processing surfing the web or playing video games However the same cannot be said for applications that require large powerful machines Applications such as weather and climate prediction fluid flow for designing new airplanes or automobiles or nuclear plasma flow require as much computer power as we can provide and even that is not enough Today's machines operate at the teraflop level trillions of floating point operations per second and this book describes research into the petaflop region 1 015 FLOPS The six chapters provide an overview of current activities that will provide for the introduction of these machines in the years 2011 through 2015 **Special Issue on Advances in High Performance Computing** Minyi Guo, 2008 *Advances in High Performance Computing* Ivan Dimov, Stefka
