Cook,1969 Introduction to Tagmemic Analysis is an application of the methods of linguistic science to practical language problems at the level of grammar It presupposes a general introduction to the science of linguistics and a knowledge of phonetics and phonemics This introduction deals with inductive methods for analyzing real languages beginning with explicit sets of data In the application of these methods the beginner is encouraged to use his knowledge of traditional grammar within the limitations imposed by a strictly formal approach to analysis The tagmemic system is used as the formal method for presenting the results of this inductive analysis It is maximally taxonomic every function and form is given a name This system seems best suited for students beginning language analysis and for more advanced students who are analyzing an unknown language for the first time At a later stage more sophisticated methods for presenting the results of analysis might be attempted
