

Configurable Computing Architectures

- Configurable Computing architectures combine elements of general-purpose computing and application-specific integrated circuits (ASICs).
 - The general-purpose processor operates with fixed circuits that perform multiple tasks under the control of software.
 - An ASIC contains circuits specialized to a particular task and thus needs little or no software to instruct it.
- The configurable computer can execute software commands that alter its configurable devices (e.g. FPGA circuits) as needed to perform a variety of jobs.

Reconfigurable Computing Scott Hauck, André DeHon, 2010-07-26 Reconfigurable Computing marks a revolutionary and hot topic that bridges the gap between the separate worlds of hardware and software design the key feature of reconfigurable computing is its groundbreaking ability to perform computations in hardware to increase performance while

retaining the flexibility of a software solution Reconfigurable computers serve as affordable fast and accurate tools for developing designs ranging from single chip architectures to multi chip and embedded systems Scott Hauck and Andre DeHon have assembled a group of the key experts in the fields of both hardware and software computing to provide an introduction to the entire range of issues relating to reconfigurable computing FPGAs field programmable gate arrays act as the computing vehicles to implement this powerful technology Readers will be guided into adopting a completely new way of handling existing design concerns and be able to make use of the vast opportunities possible with reconfigurable logic in this rapidly evolving field Designed for both hardware and software programmers Views of reconfigurable programming beyond standard programming languages Broad set of case studies demonstrating how to use FPGAs in novel and efficient ways

Fine- and Coarse-Grain Reconfigurable Computing Stamatis Vassiliadis, Dimitrios Soudris, 2007-09-24 Fine and Coarse Grain Reconfigurable Computing gives the basic concepts and building blocks for the design of Fine or FPGA and Coarse Grain Reconfigurable Architectures Recently developed integrated architecture design and software supported design flow of FPGA and coarse grain reconfigurable architecture are also described Part I consists of two extensive surveys of FPGA and Coarse Grain Reconfigurable Architectures In Part II case studies innovative research results about reconfigurable architectures and design frameworks from three projects AMDREL MOLEN and ADRES and DRESC and a new classification according to microcoded architectural criteria are described Fine and Coarse Grain Reconfigurable Computing is an essential reference for researchers and professionals and can be used as a textbook by undergraduate graduate students and professors

given system and allocate space on a device for the computation of incoming tasks and therefore presents several temporal placement approaches for off line as well as on line placement On line and Dynamic Interconnection This chapter reviews and explains the different approaches for allowing communication between modules dynamically placed at run time on a given device Designing a reconfigurable application on Xilinx Virtex FPGA In this section the different design approaches of partial reconfigurable systems on the Xilinx FPGAs that are one of the few one on the market with this feature is explained System on programmable chip System on programmable chip is a hot topic in reconfigurable computing This is mainly the integration of a system made upon some peripheral UART Ethernet VGA etc but also computational Coding filter etc hardware modules on one programmable chip The current usable solutions are presented The book furthermore focusses on the development of adaptive multiprocessors on chip i e systems consisting of a set of Processors and exchangeable hardware accelerators Applications This part covers the use of reconfigurable system in computer architecture rapid prototyping reconfigurable supercomputer reconfigurable massively parallel computers and algorithm better adapted for reconfigurable systems distributed arithmetic network packet processing etc
