ABSTRACT

In order to restore distorted images, the unknown blurs have to be identified from the blurred images themselves. We formulate the blur identification problem as a constrained maximum likelihood problem. The constraints directly incorporate a priori known relations between the blur (and image model) coefficients, such as symmetry properties, into the identification procedure. The resulting nonlinear minimization problem is solved iteratively, yielding a very general identification algorithm. An example of blur identification on synthetic data is given.

1. INTRODUCTION

The first step towards the restoration of degraded images is the identification of the kind of degradation the image has suffered. Modeling a blurred image as the output of a 2-dimensional linear system, the identification problem is the problem of estimating the unknown characterizing point-spread function (PSF) of this system. One approach to blur identification is to obtain a model of the blurring system from the physical nature of the problem. Unfortunately, one has hardly ever enough a priori knowledge to determine the PSF in this way. Therefore, the information about the blurring process has to be determined from the blurred image itself.

The earliest work on blur identification concentrated on identifying PSFs that have zeros only on the unit \mathbb{R}^2 -circle [1]. One of the shortcomings of this method is that PSFs which do not satisfy this requirement, such as a properly truncated Gaussian PSF, cannot be identified. In more recent work [2,3] the original image is first modeled as a 2-D autoregressive (AR) process. Then, if the observed blurred image is assumed noiseless, the image and blur model identification problem is specified as a 2-D autoregressive moving-average (ARMA) identification problem, where the AR coefficients are related only to the image model, and the MA coefficients only to the blur model (PSF).

Tetaly et al. [2] derived maximum likelihood estimates for these ARMA parameters, and computed them by first decomposing the PSF into four (real) quarterplane convolutional factors, each of

which is stable in its direction of recursion, and next identifying each of these factors recursively. This approach assumes that the unknown PSF is real, symmetric (i.e. zero phase) and has a positive Fourier transform. Sissord et al. [3] showed that the 2-D ARMA identification can be done in parallel, where each of the parallel channels requires the identification of a 1-D complex ARMA process. An intermediate high-order AR approximation step is used to compute these ARMA coefficients.

In this paper we formulate the blur identification problem as a constrained maximum likelihood (ML) problem. The linear constraints incorporated in the formulation represent a priori known relations between the blur (or image model) coefficients. The resulting nonlinear minimization problem is solved by employing an iterative gradient based minimization procedure. It is conceptually advantageous to use iterative methods, since they offer the possibility of incorporating a priori knowledge about the original blur and image model into the identification procedure. Furthermore, since they act upon one complete image they are free from the causality restrictions imposed by recursive techniques.

In Section II we describe the mathematical (probabilistic) models for the image and degradation. Next, in Section III, we formulate the identification problem as a ML problem. In this section we also describe the iterative algorithm for minimizing the resulting ML index. Some preliminary experimental results are presented in Section IV. Finally, Section V summarizes relevant conclusions and discusses areas of further research.

II. IMAGE AND DEGRADATION MODELS

Basic Model Development

It is assumed that the original image $f(i,j)$ (of the size $M \times N$ pixels) can be represented by the output of a 2-D AR system

$$f(i,j) = \sum_{k,l \in \mathbb{Z}^2} a(k,l) f(i-k,j-l) + v(i,j), \quad (1)$$

where $a(k,l)$ are the image model coefficients, and v_k the support of the image model, which is not necessarily causal.

By lexicographically ordering of the image data [4] we can use the more compact matrix-vector notation

$$f = Af + v, \quad (2)$$

This Enthralling World of Kindle Books: A Detailed Guide Revealing the Benefits of E-book Books: A Realm of Convenience and Flexibility Kindle books, with their inherent portability and ease of access, have freed readers from the constraints of physical books. Gone are the days of carrying bulky novels or meticulously searching for particular titles in bookstores. E-book devices, stylish and lightweight, effortlessly store an wide library of books, allowing readers to indulge in their favorite reads anytime, anywhere. Whether traveling on a busy train, lounging on a sun-kissed beach, or just cozying up in bed, E-book books provide an exceptional level of convenience. A Literary Universe Unfolded: Exploring the Wide Array of Kindle Iterative Identification And Restoration Of Images Iterative Identification And Restoration Of Images The E-book Shop, a virtual treasure trove of literary gems, boasts an wide collection of books spanning varied genres, catering to every readers taste and choice. From captivating fiction and mind-stimulating non-fiction to classic classics and contemporary bestsellers, the E-book Store offers an exceptional abundance of titles to discover. Whether looking for escape through immersive tales of imagination and exploration, diving into the depths of historical narratives, or expanding ones understanding with insightful works of science and philosophy, the E-book Shop provides a gateway to a bookish universe brimming with limitless possibilities. A Game-changing Factor in the Bookish Scene: The Enduring Impact of E-book Books Iterative Identification And Restoration Of Images The advent of Kindle books has certainly reshaped the bookish landscape, introducing a model shift in the way books are released, distributed, and consumed. Traditional publication houses have embraced the digital revolution, adapting their approaches to accommodate the growing demand for e-books. This has led to a surge in the availability of E-book titles, ensuring that readers have entry to a vast array of bookish works at their fingertips. Moreover, E-book books have democratized entry to books, breaking down geographical barriers and offering readers worldwide with similar opportunities to engage with the written word. Regardless of their place or socioeconomic background, individuals can now immerse themselves in the intriguing world of books, fostering a global community of readers. Conclusion: Embracing the E-book Experience Iterative Identification And Restoration Of Images E-book books Iterative Identification And Restoration Of Images, with their inherent convenience, versatility, and wide array of titles, have undoubtedly transformed the way we experience literature. They offer readers the freedom to discover the limitless realm of written expression, anytime, everywhere. As we continue to navigate the ever-evolving online landscape, Kindle books stand as testament to the persistent power of storytelling, ensuring that the joy of reading remains accessible to all.
