CHI '89 Conference Proceedings ACM, Association for Computing Machinery, 1989 **Human Factors in Computing Systems** Ken Bice, Clayton Lewis, 1989 *Human Factors in Computing Systems* Ken Bice, Clayton Lewis, SIGCHI (Group : U.S.), Human Factors Society, 1989 **Human Factors in Computing Systems** Association for Computing Machinery, Association for Computing Machinery Staff, Joyce L. Vedral, 1991 This volume contains papers panel overviews descriptions of demonstrations and videos laboratory overviews abstracts of special interest group meetings and doctoral consortium presentation and titles of posters short papers workshops and tutorials from the annual conference on Human Factors in Computing Systems sponsored by ACM SIGCHI Coordination Theory and Collaboration Technology Gary M. Olson, Thomas W. Malone, John B. Smith, 2013-05-13 The National Science Foundation funded the first Coordination Theory and Collaboration Technology initiative to look at systems that support collaborations in business and elsewhere This book explores the global revolution in human interconnectedness It will discuss the various collaborative workgroups and their use in technology The initiative focuses on processes of coordination and cooperation among autonomous units in human systems in computer and communication systems and in hybrid organizations of both systems This initiative is motivated by three scientific issues which have been the focus of separate research efforts but which may benefit from collaborative research The first is the effort to discover the principles underlying how people collaborate and coordinate work efficiently and productively in environments characterized by a high degree of decentralized computation and decision making The second is to gain a better fundamental understanding of the structure and outputs of organizations industries and markets which incorporate sophisticated decentralized information and communications technology as an important component of their operations The third is to understand problems of coordination in decentralized or open computer systems **Adaptive Hypertext and Hypermedia** Peter Brusilovsky, Alfred Kobsa, Julita Vassileva, 2013-04-17 Hypertext hypermedia systems and user model based adaptive systems in the areas of learning and information retrieval have for a long time been considered as two mutually exclusive approaches to information access Adaptive systems tailor information to the user and may guide the user in the information space to present the most relevant material taking into account a model of the user's goals interests and preferences Hypermedia systems on the other hand are user neutral they provide the user with the tools and the freedom to explore an information space by browsing through a complex network of information nodes Adaptive hypertext and hypermedia systems attempt to bridge the gap between these two approaches Adaptation of hypermedia systems to each individual user is increasingly needed With the growing size complexity and heterogeneity of current hypermedia systems such as the World Wide Web it becomes virtually impossible to impose guidelines on authors concerning the overall organization of hypermedia information The networks therefore become so complex and unstructured that the existing navigational tools are no longer powerful enough to provide orientation on where to search for the needed

information It is also not possible to identify appropriate pre defined paths or subnets for users with certain goals and knowledge backgrounds since the user community of hypermedia systems is usually quite inhomogeneous This is particularly true for Web based applications which are expected to be used by a much greater variety of users than any earlier standalone application A possible remedy for the negative effects of the traditional one size fits all approach in the development of hypermedia systems is to equip them with the ability to adapt to the needs of their individual users A possible way of achieving adaptivity is by modeling the users and tailoring the system s interactions to their goals tasks and interests In this sense the notion of adaptive hypertext hypermedia comes naturally to denote a hypertext or hypermedia system which reflects some features of the user and or characteristics of his system usage in a user model and utilizes this model in order to adapt various behavioral aspects of the system to the user This book is the first comprehensive publication on adaptive hypertext and hypermedia It is oriented towards researchers and practitioners in the fields of hypertext and hypermedia information systems and personalized systems It is also an important resource for the numerous developers of Web based applications The design decisions adaptation methods and experience presented in this book are a unique source of ideas and techniques for developing more usable and more intelligent Web based systems suitable for a great variety of users The practitioners will find it important that many of the adaptation techniques presented in this book have proved to be efficient and are ready to be used in various applications

Modeling Creativity and Knowledge-Based Creative Design John S. Gero, Mary Lou Maher, 2013-05-13 Over the last decade research into design processes utilizing ideas and models drawn from artificial intelligence has resulted in a better understanding of design particularly routine design as a process Indeed most of the current research activity directly or indirectly deals only with routine design Not surprisingly many practicing designers state that the level of understanding represented by these models is only of mild interest because they fail to embody any ideas about creativity This volume provides a set of chapters in the areas of modeling creativity and knowledge based creative design that examines the potential role and form of computer aided design which supports creativity It aims to define the state of the art of computational creativity in design as well as to identify research directions Published at a time when the field of computational creativity in design is still immature it should influence the directions of growth and assist the field in reaching maturity

Mind Matters David M. Steier, Tom M. Mitchell, 2014-03-05 Based on a symposium honoring the extensive work of Allen Newell one of the founders of artificial intelligence cognitive science human computer interaction and the systematic study of computational architectures this volume demonstrates how unifying themes may be found in the diversity that characterizes current research on computers and cognition The subject matter includes an overview of cognitive and computer science by leading researchers in the field a comprehensive description of Allen Newell s Soar a computational architecture he developed as a unified theory of cognition commentary on how the Soar theory of cognition relates to important issues in cognitive and computer science rigorous treatments of controversial issues in

cognition methodology of cognitive science hybrid approaches to machine learning word sense disambiguation in understanding material language and the role of capability processing constraints in architectural theory comprehensive and systematic methods for studying architectural evolution in both hardware and software a thorough discussion of the use of analytic models in human computer interaction extensive reviews of important experiments in the study of scientific discovery and deduction and an updated analysis of the role of symbols in information processing by Herbert Simon Incorporating the research of top scientists inspired by Newell s work this volume will be of strong interest to a large variety of scientific communities including psychologists computational linguists computer scientists and engineers and interface designers It will also be valuable to those who study the scientific process itself as it chronicles the impact of Newell s approach to research simultaneously delving into each scientific discipline and producing results that transcend the boundaries of those disciplines

Artificial Intelligence in Design '91 J. S. Gero,2014-05-23 Artificial Intelligence in Design 91 is a collection of 47 papers from the First International Conference on Artificial Intelligence in Design held at Edinburgh in June 1991 The papers in this book are grouped into 13 headings starting with a background of AI design systems and to which extent AI that results from being used as planning tool be applied to quality oriented design processes in architecture A constraint driven approach to object oriented design is also shown on real world objects The use of CADSYN in the structural design of buildings is examined along with design dependent knowledge and design independent knowledge Discussions on empowering designers with integrated design environments are given whereby design objects may be retrieved from catalogues without requiring users to form queries Mention is given to automated adjustment of parameter values frequently used in computer routine applications The book also introduces the Computer Aided Design CAD as applied to architecture Design representation using data models non monotonic reasoning in design and the cognitive aspects of design using empirical studies are discussed Topics of the industrial applications of AI in design such as the needed steps to develop a successful AI based tool and a review of the Castlemain Project and telecommunication distribution networks follow This book is suitable for programmers computer science students and architects and engineers who use computers in their line of work
