Americas Engineering Marvels:

America's Engineering Marvels Carol M. Highsmith, Carol Highsmith, Ted Landphair, 2004-01-06 Renowned photographer Carol M Highsmith and writer Ted Landphair take a fresh look at some of the most remarkable structures ever built in America Many of the sights included such as Hoover Dam were built to serve a critical function for others like the St Louis Arch or Mount Rushmore the function was purely aesthetic or commemorative But all are notable for their scale and the technological genius that went into constructing them Travel pictorial wizards Highsmith and Landphair turn themselves here to the wonder of industrial America The can do American spirit resonates behind every one of the sights included A tribute to some of the most enterprising ingenious and visionary minds of the last century this volume also reminds us of the lives lost and risks taken to get the job done The fantastic oversize full color photos of marvels like the Washington Monument Brooklyn Bridge and the 7 7 mile long Flathead Tunnel in Montana the world s seventh longest railroad tunnel are an unforgettable chronicle of American engineering at its best

Epic Achievements Against Incredible Odds Steve McCurdy, 2015-06-18 This is the fascinating story of how a few great Americans between 1930 and 1952 overcame incredible challenges to build some of the world s most remarkable architectural wonders Drawing upon his impressive knowledge of American history the author chronicles the country s emergence in the Roaring Twenties as the world s pre eminent builder of great dams bridges and skyscrapers He skillfully combines little known back stories with vintage photographs to show how America s architects engineers and contractors working with arcane technologies and slide rules used innovation ingenuity and inspiration to build some of the world s most extraordinary structures faster and better than they have been built before or since Mr McCurdy s narrative includes Hoover Dam In the depths of the Great Depression a man from Maine named Frank Crowe assembled a rag tag army of 5 000 unemployed men in the middle of the Mojave Desert Working in conditions that were sometimes brutal without the benefit of modern technologies Crowe and his men not only built the world s greatest dam but they finished it under budget two years ahead of schedule The Golden Gate Bridge In his account of the building of this celebrated bridge McCurdy tells the little known back story of Charles Ellis Fired by a boss jealous of his engineering genius Ellis worked tirelessly behind the scenes without pay or acknowledgement to write the bid specifications for every single component of the bridge Although he is now regarded as the father of the bridge Ellis received no recognition during his lifetime The Empire State Building Paul Starrett was an organizational genius and is often referred to as the father of the American skyscraper McCurdy tells the remarkable story of how in 1931 Starrett built the Empire State Building from ribbon cutting to completion in the astonishing time of 391 days a record which has never been challenged and which amazes structural engineers to this day The Pentagon Prior to the Japanese attack on Pearl Harbor in 1941 40 000 War Department personnel in Washington DC were spread out among 22 separate buildings One man was given the task of bringing them all together under one roof Less than eight months after he broke ground Brehon Burke Somervell

was moving employees into the world's largest building the 6.6 million square foot Pentagon The SS United States When he was eight years old William Francis Gibbs began dreaming of building the world's greatest ocean liner Fifty eight years later on May 14 1952 Gibbs guided his thousand foot long dream ship into open waters With the greatest power to weight ratio ever achieved in any passenger vessel the SS United States broke the transatlantic crossing speed record by 10 hours on her maiden voyage In the second half of *Epic Achievements Against Incredible Odds* the author carefully traces the country's post war decline as the world's great builder and identifies and analyzes the causes of its slide McCurdy ends his book with a frank and compelling assessment of how when and whether the United States will ever bounce back and re establish its supremacy as the world's master builder of architectural icons Order this book now to enjoy the unforgettable stories of the men behind some of history's most enduring engineering accomplishments *American Magazine*, 1915 *American Illustrated Magazine*, 1928

Engineering America Richard Haw, 2020-02-12 John Roebling was one of the nineteenth century's most brilliant engineers ingenious inventors successful manufacturers and fascinating personalities Raised in a German backwater amid the war torn chaos of the Napoleonic Wars he immigrated to the US in 1831 where he became wealthy and acclaimed eventually receiving a carte blanche contract to build one of the nineteenth century's most stupendous and daring works of engineering a gigantic suspension bridge to span the East River between New York and Brooklyn In between he thought wrote and worked tirelessly He dug canals and surveyed railroads he planned communities and founded new industries Horace Greeley called him a model immigrant generations later F Scott Fitzgerald worked on a script for the movie version of his life Like his finest creations Roebling was held together by the delicate balance of countervailing forces On the surface his life was exemplary and his accomplishments legion As an immigrant and employer he was respected throughout the world As an engineer his works profoundly altered the physical landscape of America He was a voracious reader a fervent abolitionist and an engaged social commentator His understanding of the natural world however bordered on the occult and his opinions about medicine are best described as medieval For a man of science and great self certainty he was also remarkably quick to seize on a whole host of fads and foolish trends Yet Roebling held these strands together Throughout his life he believed in the moral application of science and technology that bridges along with other great works of connection the Atlantic Cable the Transcontinental Railroad could help bring people together erase divisions and heal wounds Like Walt Whitman Roebling was deeply committed to the creation of a more perfect union forged from the raw materials of the continent John Roebling was a complex deeply divided yet undoubtedly influential figure and this biography illuminates not only his works but also the world of nineteenth century America Roebling's engineering feats are well known but the man himself is not for alongside the drama of large scale construction lies an equally rich drama of intellectual and social development and crisis one that mirrored and reflected the great forces trials and failures of nineteenth century America

The American Environment Revisited Geoffrey L. Buckley, Yolonda Youngs, 2018-03-01

This innovative book provides a dynamic and often surprising view of the range of environmental issues facing the United States today. A distinguished group of scholars examines the growing temporal, spatial, and thematic breadth of topics historical geographers are now exploring. Seventeen original chapters examine topics such as forest conservation, mining, landscapes, urban environment, justice, solid waste, exotic species, environmental photography, national and state park management, recreation and tourism, and pest control. Commemorating the twenty-fifth anniversary of the publication of the seminal work *The American Environment: Interpretations of Past Geographies*, the book clearly shows much has changed since 1992. Indeed, not only has the range of issues expanded, but an increasing number of geographers are forging links with environmental historians, promoting a level of intellectual cross-fertilization that benefits both disciplines. As a result, environmental historical geographies today are richer and more diverse than ever. *The American Environment Revisited* offers a comprehensive overview that gives both specialist and general readers a fascinating look at our changing relationships with nature over time.

[A Little about A Lot](#) Jeffrey Posnick, 2023-12-29 Did you know you can change someone's opinion about you by being nice to them? Or that a business should first establish trust with its employees before it does so with its customers? And you may think you want that job more than anything, but you shouldn't want it badly enough to violate your conscience. These are just a few small samplings of the kinds of wisdom packed inside *A Little About a Lot*. Whether you're a student of life or just curious about things, author Jeffrey Posnick's eclectic treasure of more than two hundred short topics, from human behavior to the economy to the arts, has something for everyone. All that is needed is a curious mind and a desire to learn. So step away from yourself and pay attention to the details. *A Little About a Lot* will help you along that journey of learning new things, and hopefully you will discover more about yourself in the process.

Technical Innovation in American History Rosanne Welch, Peg A. Lamphier, 2019-02-22 From the invention of eyeglasses to the Internet, this three-volume set examines the pivotal effects of inventions on society, providing a fascinating history of technology and innovations in the United States from the earliest European colonization to the present. *Technical Innovation in American History* surveys the history of technology, documenting the chronological and thematic connections between specific inventions, technological systems, individuals, and events that have contributed to the history of science and technology in the United States. Covering eras from colonial times to the present day in three chronological volumes, the entries include innovations in fields such as architecture, civil engineering, transportation, energy, mining and oil industries, chemical industries, electronics, computer and information technology, communications, television, radio, and print, agriculture and food technology, and military technology. The A-Z entries address key individuals, events, organizations, and legislation related to themes such as industry, consumer and medical technology, military technology, computer technology, and space science, among others, enabling readers to understand how specific inventions, technological systems, individuals, and events influenced the history, cultural development, and even self
