Americas South:

Experiences of War in Europe and the Americas, 1792-1815 Mark Lawrence, 2021-07-20 This work seeks to offer a new way of viewing the French Wars of 1792-1815. Most studies of this period offer international political and military analyses using the French Revolution and Napoleon as the prime mover. But this book focuses on military and civilian responses to French Revolutionary and Napoleonic wars throughout the rest of Europe and the Americas. It shows how the unprecedented mobilization of this era forged a generation of soldiers and civilians sharing a common experience of suffering, bequeathing the West with a new veteran sensibility. Using a range of sources, especially memoirs, this book reveals the adventure and suffering confronting ordinary soldiers campaigning in Europe and the Americas and the burdens imposed on civilians enduring rising and falling empires across the West. It also reveals how the wars liberated slaves, serfs, and common people through revolutions and insurgencies. [Institute of Pacific Relations](#) United States. Congress. Senate. The Global Prehistory of Human Migration Immanuel Ness, 2014-08-29 Previously published as the first volume of *The Encyclopedia of Global Human Migration*, this work is devoted exclusively to prehistoric migration covering all periods and places from the first hominin migrations out of Africa through the end of prehistory. Presents interdisciplinary coverage of this topic including scholarship from the fields of archaeology, anthropology, genetics, biology, linguistics, and more. Includes contributions from a diverse international team of authors representing 17 countries and a variety of disciplines. Divided into two sections covering the Pleistocene and Holocene, each section examines human migration through chapters that focus on different regional and disciplinary lenses. *Dynamics of the Tropical Atmosphere and Oceans* Peter J. Webster, 2020-06-08 This book presents a unique and comprehensive view of the fundamental dynamical and thermodynamic principles underlying the large circulations of the coupled ocean-atmosphere system. *Dynamics of the Tropical Atmosphere and Oceans* provides a detailed description of macroscale tropical circulation systems such as the monsoon, the Hadley and Walker circulations, El Niño, and the tropical ocean warm pool. These macroscale circulations interact with a myriad of higher-frequency systems ranging from convective cloud systems to migrating equatorial waves that attend the low-frequency background flow. Towards understanding and predicting these circulation systems, a comprehensive overview of the dynamics and thermodynamics of large-scale tropical atmosphere and oceans is presented using both a reductionist and holistic perspectives of the coupled tropical system. The reductionist perspective provides a detailed description of the individual elements of the ocean and atmospheric circulations. The physical nature of each component of the tropical circulation, such as the Hadley and Walker circulations, the monsoon, the incursion of extratropical phenomena into the tropics, precipitation distributions, equatorial waves, and disturbances, is described in detail. The holistic perspective provides a physical description of how the collection of the individual components produces the observed tropical weather.

and climate How the collective tropical processes determine the tropical circulation and their role in global weather and climate is provided in a series of overlapping theoretical and modelling constructs The structure of the book follows a graduated framework Following a detailed description of tropical phenomenology the reader is introduced to dynamical and thermodynamical constraints that guide the planetary climate and establish a critical role for the tropics Equatorial wave theory is developed for simple and complex background flows including the critical role played by moist processes The manner in which the tropics and the extratropics interact is then described followed by a discussion of the physics behind the subtropical and near equatorial precipitation including arid regions The El Ni o phenomena and the monsoon circulations are discussed including their covariance and predictability Finally the changing structure of the tropics is discussed in terms of the extent of the tropical ocean warm pool and its relationship to the intensity of global convection and climate change Dynamics of the Tropical Atmosphere and Oceans is aimed at advanced undergraduate and early career graduate students It also serves as an excellent general reference book for scientists interested in tropical circulations and their relationship with the broader climate system
