Beyond The Cognitive Map:

Beyond the Cognitive Map A. David Redish, 1999 There are currently two major theories about the role of the hippocampus a distinctive structure in the back of the temporal lobe One says that it stores a cognitive map the other that it is a key locus for the temporary storage of episodic memories A David Redish takes the approach that understanding the role of the hippocampus in space will make it possible to address its role in less easily quantifiable areas such as memory Basing his investigation on the study of rodent navigation one of the primary domains for understanding information processing in the brain he places the hippocampus in its anatomical context as part of a greater functional system Redish draws on the extensive experimental and theoretical work of the last 100 years to paint a coherent picture of rodent navigation His presentation encompasses multiple levels of analysis from single unit recording results to behavioral tasks to computational modeling From this foundation he proposes a novel understanding of the role of the hippocampus in rodents that can shed light on the role of the hippocampus in primates explaining data from primate studies and human neurology The book will be of interest not only to neuroscientists and psychologists but also to researchers in computer science robotics artificial intelligence and artificial life

Beyond the Cognitive Map A. David Redish, 1997 Language Machines Leif Weatherby, 2025-06-24 How generative AI systems capture a core function of language Looking at the emergence of generative AI Language Machines presents a new theory of meaning in language and computation arguing that humanistic scholarship misconstrues how large language models LLMs function Seeing LLMs as a convergence of computation and language Leif Weatherby contends that AI does not simulate cognition as widely believed but rather creates culture This evolution in language he finds is one that we are ill prepared to evaluate as what he terms remainder humanism counterproductively divides the human from the machine without drawing on established theories of representation that include both To determine the consequences of using AI for language generation Weatherby reads linguistic theory in conjunction with the algorithmic architecture of LLMs He finds that generative AI captures the ways in which language is at first complex cultural and poetic and only later referential functional and cognitive This process is the semiotic hinge on which an emergent AI culture depends Weatherby calls for a general poetics of computational cultural forms under the formal conditions of the algorithmic reproducibility of language Locating the output of LLMs on a spectrum from poetry to ideology Language Machines concludes that literary theory must be the backbone of a new rhetorical training for our linguistic computational culture

A Sense of Space John Edward Huth, 2025-11-13 From global navigation to natal charts to memory palaces and beyond a thrilling journey through humanity's visualization of new spaces When you give directions do you tell someone to go straight ahead and turn left Or do you suggest that they head north before moving west Your answer reveals more than you might think In *A Sense of Space* writer and physicist John Edward Huth uses these two kinds of navigation either centered on or independent of people to help readers chart a path through evolving spatial models In

doing so he offers an astonishing exploration of how changing scientific models of space alter our social perceptions and vice versa New visions of space can emanate from human considerations he argues and those new visions can in turn spawn new cultural phenomena With accessible introductions to topics including mental maps astrology astronomy particle physics and Einstein s relativity Huth makes clear that although our minds have evolved to comprehend space in terrestrial distances we routinely extend this understanding to realms far removed from our everyday experiences from cosmological to subatomic scales Taking us across the eons from the myth of a flat earth to the mysteries of the multiverse *A Sense of Space* is an energetic thoughtful guide to how we orient ourselves in our world and beyond *Why People Get Lost* Paul A.

Dudchenko,2010 At some point in our lives most of us have been lost How does this happen What are the limits of our ability to find our way Do we have an innate sense of direction How people get lost reviews the psychology and neuroscience of navigation It starts with a history of studies looking at how organisms solve mazes It then reviews contemporary studies of spatial cognition and the wayfinding abilities of adults and children It then considers how specific parts of the brain provide a cognitive map and a neural compass This book also considers the neurology of spatial disorientation and the tendency of patients with Alzheimer s disease to lose their way Within the book the author proposes that we get lost because our brain s compass becomes misoriented This book is written for anyone with an interest in navigation and the brain It assumes no specialised knowledge of neuroscience but covers recent advances in our understanding of how the brain represents space

Cognition Margaret W. Matlin,2008-10-13 This text s success has come in large part from its up to date coverage of important research and theories and offers the latest and most comprehensive overview of cognition on the market today Recent developments in perception imagery problem solving and creativity are highlighted along with advances in such areas as memory and language and expanded theoretical approaches **The Quarterly Journal of Experimental Psychology**

,2001 **Current Practices in Workplace and Organizational Learning** Bente Elkjaer,Maja Marie Lotz,Niels Christian Mossfeldt Nickelsen,2022-01-01 The central assumption that guides this book is that research and practice about learning at the workplace has recently lost its critical edge This book explores what has happened to workplace learning and organizational learning and studies what has replaced it In addition the book discusses to what extend there are reasons to revitalize it Today themes such as innovation co creation and knowledge sharing seem to have become preferred and referred to as theoretical fields as well as fields of practice In several chapters of this book it is argued that the critical power of learning could be regained by starting a new discussion of how these new fields of practice can be substantiated by topics such as learning arrangements learning mechanisms and learning strategies Hence the aim of this book is to both advance and recapture our knowledge of learning in today s increasingly complex world of work and organizing The contributions in this work do so by revisiting classic research on workplace and organizational learning and discussing how insights from this body of literature evokes new meaning It sets the stage for new agendas and rethinks current practices that are entangled in

activities such as innovation co creation knowledge sharing or other currently widespread fields of practice Neural Computation ,2005 *Principles of Cognition* Eduardo Mercado III,2024-08-20 A comprehensive overview of what psychologists now know about the nature of cognition *Principles of Cognition* provides students with an invaluable introduction to the modern science of cognition blending invaluable insights from behavioral and neuroscientific studies of humans and other animals with unique examples cutting edge research summaries and real world applications This accessible textbook builds on the legacy of psychologist William James by emphasizing not only the form cognition takes in laboratory research but also the functional dynamics of cognitive processes in everyday life and the ways they vary across individuals and species Using an integrative approach that highlights the relevance of cognition across psychological disciplines it engages students by showing how cognition emerges over time how cognitive abilities can be improved and how thinking can be upended by something as simple as falling in love Discusses topics in cognition rarely covered by other textbooks including perception of time and space consciousness animal cognition mathematical and reading skills emotions intelligence generalization and social cognition Emphasizes learning and its interactions with memory and cognition Features practical applications from cognitive research in every chapter Connects topics across chapters to promote retention and critical thinking Draws on the latest experimental naturalistic and applied research Integrates findings about animals and children with traditional studies of adults to develop a more neurally grounded framework for thinking about the mechanisms of cognition An ideal textbook for undergraduate and graduate classrooms **Boundaries of Home** Doug Aberley,1993

Mapping Strategic Thought Anne Sigismund Huff,1990-12-11 A two fold cognitive study including a description of empirical investigations on issues of concern to strategic management and a presentation of a set of methodological tools for depicting and analyzing managerial thought **International Workshop on Advanced Learning Technologies** ,2000 This text features the conference proceedings of the International Workshop on Advanced Learning Technologies IWALT 2000 Topics addressed include adaptive hypermedia agents designing educational systems distance education electronic assessment intelligent tutoring systems and more Introduction to Psychology Dennis Coon,1998-08 In this revitalized redesigned and thoroughly updated Eighth Edition of his best selling text Dennis Coon once again presents psychology in a way readers will find fascinating relevant and above all accessible Professors and readers alike have found Coon s text not only interesting and easy to read but exceptionally easy to learn from Built into every chapter are a number of features that help readers grasp major concepts develop a broad understanding of psychology s diversity and see for themselves how psychology relates to the practical problems of everyday life Professors and readers appreciate the way that Dennis Coon speaks to his them His delight in the subject matter of psychology and in his own readers curiosity insights imagination and interest is apparent on every page While Coon reports the latest research the latest controversies and the key scientific content important to the course he does so with a sense of humor and an awareness of readers learning needs that set his

book apart from any other in the field In a course where professors are frequently confronted by readers who haven't actually read their textbooks Coon's text offers a solution Coon effectively presents an approach that involves readers and gets them hooked on psychology and eager to read on Because readers become actively involved with the material they develop a basic understanding of psychology that they take with them into their future courses and careers Dennis Coon was the first textbook author to make effective use of cognitive principles to teach psychology by building each chapter around the SQ3R study reading formula survey question read recite and review Because SQ3R has been a part of the underlying structure of the text from its inception this proven method works better in Coon's text than in any of the many texts that have emerged over the years that have incorporated the SQ3R structure as an add on

Encyclopedia of the Sciences of Learning Norbert M. Seel, 2011-10-05 Over the past century educational psychologists and researchers have posited many theories to explain how individuals learn i.e. how they acquire organize and deploy knowledge and skills The 20th century can be considered the century of psychology on learning and related fields of interest such as motivation cognition metacognition etc and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology Beyond folk psychology and its naive theories of learning psychological learning theories can be grouped into some basic categories such as behaviorist learning theories connectionist learning theories cognitive learning theories constructivist learning theories and social learning theories Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology education information science biology and as a result of the emergence of computer technologies especially also in the field of computer sciences and artificial intelligence As a consequence machine learning struck a chord in the 1980s and became an important field of the learning sciences in general As the learning sciences became more specialized and complex the various fields of interest were widely spread and separated from each other as a consequence even presently there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely The *Encyclopedia of the Sciences of Learning* provides an up to date

broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields including relevant areas of instruction pedagogy cognitive sciences and especially machine learning and knowledge engineering This modern compendium will be an indispensable source of information for scientists educators engineers and technical staff active in all fields of learning More specifically the Encyclopedia provides fast access to the most relevant theoretical terms provides up to date broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies supplies clear and precise explanations of the theoretical terms cross references to related entries and up to date references to important research and publications The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning the entries are written by a distinguished panel of researchers in the various fields of the learning sciences Proceedings of the IASTED International Conference, Law and Technology, Honolulu, Hawaii, USA, August 9-12, 1999 M.
