Beyond Mechanization:

Beyond Mechanization Larry Hirschhorn, 1986 Human skill and judgment are needed now more than ever to effectively run today's complex computerized production systems. In this thought-provoking study of work, worker, and machine in the postindustrial age, Hirschhorn points out that factories will become places of learning where the worker must be able to diagnose and solve an array of problems generated by error-prone machine systems. With numerous examples, he shows that the new technology can fail in unexpected ways and that human judgment has become increasingly important. The new technology also blurs the line between managing and working, requiring workers, craftsmen, machine operators, or engineers to become generalists who will have to deal with unstructured and open-ended problems. Hirschhorn links theory to the shop floor, examining such issues as the role of unions and the economics of the job shop and describes a new type of factory setting where supervisors are teachers and workers are organized into teams paid according to how much they have learned. Larry Hirschhorn is Senior Researcher, Management and Behavioral Science Center, University of Pennsylvania.

The Workplace Within Larry Hirschhorn, 1990-01-24 In this revealing study, Larry Hirschhorn examines the rituals or social defenses organizations develop to cope with change. Using extended case studies from offices, factories, and social services, he describes why these often irrational practices that fragment and injure individuals within the workplace exist, how they operate, and how they can be reshaped to enhance people's work experience.

Beyond Survival Cyrus Bina, Laurie M. Clements, Chuck Davis, 2016-09-16 This text uses an innovative approach to the dynamics of labor's decline and proposes policy initiatives necessary for its revitalization. The book emphasizes the need for restructuring of capitalism on a global scale and challenges traditional economic and industrial relations wisdom.

Beyond Taylorism Lorraine Giordano, 2016-07-27 This book explores two major contemporary changes in the workplace: the impact of computerization on skills and the organization of production, and the role of quality circles in the democratization of the workplace and the reorganization of bureaucratic decision making. It is concerned with the labor processes which experience deskilling, reskilling, and shifts in the lines of demarcation between occupations. Participation in quality circles raises issues of conflict rather than labor management cooperation, and management's attempt to undermine collective bargaining agreements.

The New Freeman Suzanne La Follette, 1930 *Machine and Sovereignty* Yuk Hui, 2024-10-29 Developing a new political thought to address today's planetary crises. What is planetary thinking today? Arguing that a new approach is urgently needed, Yuk Hui develops a future-oriented mode of political thought that encompasses the unprecedented global challenges we are confronting: the rise of artificial intelligence, the ecological crisis, and intensifying geopolitical conflicts. *Machine and Sovereignty* starts with three premises. The first affirms the necessity of developing a new language of coexistence that surpasses the limits of nation-states and their variations; the second recognizes that political forms, including the polis, empire, and the state, are technological phenomena which Lewis Mumford terms megamachines; the third suggests

that a particular political form is legitimated and rationalized by a corresponding political epistemology The planetary thinking that this book sketches departs from the opposition between mechanism and organism which characterized modern thought to understand the epistemological foundations of Hegel s political state and Schmitt s Gro raum and their particular ways of conceiving the question of sovereignty Through this reconstruction Hui exposes the limits of the state and reflects on a new theoretical matrix based on the interrelated concepts of biodiversity noodiversity and technodiversity Arguing that we are facing the limit of modernity of the eschatological view of history of globalization and of the human Hui conceives necessary new epistemological and technological frameworks for understanding and rising to the crises of our present and our future Retail e book files for this title are screen reader friendly
