Physician Communication with Patients Jon Christianson, Louise H. Warrick, Michael Finch, Wayne B. Jonas, 2012-08-27 We all have a good idea of how we want things to go when we visit a physician We expect to be able to explain why we are there and we hope the physician will listen and possibly ask questions that help us clarify our thoughts Most of us hope that the physician will provide some expression of empathy offer a clear nontechnical assessment of our problem and describe next steps in a way that is easy to understand Ideally we would like to be asked about our ability to follow treatment recommendations Some experts say that these expectations are not only reasonable but even necessary if patients are to get the care they need Yet there is a growing body of research that suggests

the reality of physician communication with patients often falls short of this ideal in many respects A careful analysis of the findings of this research can provide guidance to physician educators health care administrators and health policy makers interested in understanding the role that improved physician communication can play in improving quality of care and patient outcomes Physician Communication with Patients summarizes findings from the academic literature pertaining to various aspects of this question discussing those findings in the context of current pressures for change in the organization and delivery of medical services

The Physician's Guide to Better Communication Barbara F. Sharf,1984 Doctor-patient Communication Gabriel Crenshaw (Jr.),2000 The Dynamic Consultation Marisa Cordella,2004-01-01 This book introduces a unique model of medical discourse that identifies the forms of talk voices that doctors and patients use during the consultation and studies the dynamic interaction as it unfolds particularly in follow up visits Natural recordings semi structured interviews questionnaires and ethnographic observations provide the data for the research which was carried out in an Outpatient Clinic in Santiago Chile Using an interactional sociolinguistic approach analysis of the data identifies doctor patient communication as a micro performance of broader socio cultural realities in which social status power knowledge and personal beliefs and values all find expression in the consultative setting Importantly while both doctor and patient voices are shown to contribute to an essentially asymmetrical exchange the study also identifies the holistic and empathic Fellow Human voice which places doctors and patients on a more equal footing In connection with this voice the Spanish concept of simpatía is also discussed While the model in this study was developed within a specific socio cultural framework it is hoped that it will be adapted and modified more widely and contribute to a better understanding between doctors and their patients **The New**

Science Communication and Health Monica Consolandi, 2024-10-17 Communication is not only a means but also a place where relationships establish This book argues that a trustworthy relationship can be established through carefully managed communication Thus knowing and understanding language and its dynamic is essential to orient oneself during communication this allows the speakers to fully take the opportunity to foster mutual trust Knowing language does not only mean managing what is said but especially being aware of what it implies entails and what is unsaid This is especially true in the case of doctor patient communication where one of the speakers is also the subject of the speech The author looks at the moment of interaction between the physician and the patient as the chance for building and consolidating a strong therapeutic alliance If the chance is not taken or wisely managed it could cause the opposite i e loss of trust also possibly influencing patient s concordance to treatment This unusual and valuable approach to doctor patient communication has its roots in the philosophy of language and the philosophy of science
