Dna Based Molecular Construction:

DNA-Based Molecular Construction Dr. Wolfgang Fritzsche, 2002-11-08 The Workshop combined different fields of molecular nanotechnology applying DNA either as subject of studies or as a molecular building block As the first meeting solely focusing on DNA nanotechnology the heterogeneous scientific background of the participants in physics chemistry and biology provided a comprehensive account of the state of the art in this multidisciplinary field and previewed the trends for further research in this promising field

DNA-Based Molecular Electronics Wolfgang Fritzsche, 2004-09-28 The conference focuses on the various applications of DNA for future molecular electronics The main topics are the characterization of DNA conductivity modification of DNA in order to generate biotemplated nanowires and the use of DNA to connect or position other nanostructures such as carbon nanotubes

BioMEMS Gerald Urban, 2007-02-01 Explosive growth in the field of microsystem technology MST has introduced a variety of promising products in major disciplines from microelectronics to life sciences Especially the life sciences and health care business was and is expected to be a major market for MST products Undoubtedly the merging of biological sciences with micro and nanoscience will create a scientific and technological revolution in future Microminiaturization of devices down to the nanoscale approaching the size of biological structures will be a prerequisite for the future success of life sciences Bioanalytical and therapeutic micro and nanosystems will be mandatory for system biologists in the long run to obtain insight into morphology the function and the interactive processes of the living system With such a deeper understanding new and personalized drugs could be developed leading to a revolution in life sciences Today microanalytical devices are used in clinical analytics or molecular biology as gene chips In parallel standard microbiomedical products are employed in the intensive care and surgical theatre mainly for monitoring and implantation purposes The gap between these two different scientific fields will be closed however as soon as functional micro devices can be produced allowing a deeper view into the function of cells and whole organisms Here a new discipline evolved which focuses on microsystems for living systems called BIOMEMS In this review at a glance the exciting field of bio microsystems from their beginnings to indicators of future successes are presented It will also show that a broad penetration of micro and nano technologies into biology and medicine will be mandatory for future scientific and new product development progress in life science

DNA-Based Nanodevices Wolfgang Fritzsche, Frank F. Bier, 2008-11-05 The use of molecular units promises novel materials and devices with special properties This approach requires the combination of these novel structures with today's technical environment DNA could potentially solve this integration problem by providing highly specific but on the other side nearly unlimited variations of coupling schemes in order to combine molecular structures with typical technical elements e.g. on a chip surface

Nanofabrication Handbook Stefano Cabrini, Satoshi Kawata, 2012-02-24 While many books are dedicated to individual aspects of nanofabrication there is no

single source that defines and explains the total vision of the field Filling this gap Nanofabrication Handbook presents a unique collection of new and the most important established approaches to nanofabrication Contributors from leading research facilities and Metallofoldamers Galia Maayan,Markus Albrecht,2013-01-18 Metallofoldamers are oligomers that fold into three dimensional structures in a controlled manner upon coordination with metal ions Molecules in this class have shown an impressive ability to form single handed helical structures and other three dimensional architectures Several metallofoldamers have been applied as sensors due to their selective folding when binding to a specific metal ion while others show promise for applications as responsive materials on the basis of their ability to fold and unfold upon changes in the oxidation state of the coordinated metal ion and as novel catalysts Metallofoldamers From Helicates to Biomimetic Architectures describes the variety of interactions between oligomers and metal species with a focus on non natural synthetic molecules Topics covered include the major classes of foldamers and their folding driving force metalloproteins and metalloenzymes helicates self assembly structure and applications abiotic metallo DNA metallo PNA and iDNA metallopeptides interactions of biomimetic oligomers with metal ions applications of metallofoldamers Encyclopedia of Supramolecular Chemistry J.
