Moroianu,2008 **CR Submanifolds of Complex Projective Space** Mirjana Djoric,Masafumi Okumura,2009-10-09
Although submanifolds of complex manifolds has been an active field of study for many years in some sense this area is not sufficiently covered in the current literature This text deals with the CR submanifolds of complex manifolds with particular emphasis on CR submanifolds of complex projective space and it covers the topics which are necessary for learning the basic properties of these manifolds We are aware that it is impossible to give a complete overview of these submanifolds but we hope that these notes can serve as an introduction to their study We present the fundamental definitions and results necessary for reaching the frontiers of research in this field There are many monographs dealing with some current interesting topics in differential geometry but most of these are written as encyclopedias or research monographs gathering recent results and giving the readers ample useful information about the topics Therefore these kinds of monographs are attractive to specialists in differential geometry and related fields and accessible to professional differential geometers However for graduate students who are less advanced in differential geometry these texts might be hard to read without assistance from their instructors By contrast the general philosophy of this book is to begin with the elementary facts about complex manifolds and their submanifolds give some details and proofs and introduce the reader to the study of CR submanifolds of complex manifolds especially complex projective space It includes only a few original results with precise proofs while the others are cited in the reference list

Real and Complex Submanifolds Young Jin Suh,Jürgen Berndt,Yoshihiro Ohnita,Byung Hak Kim,Hyunjin Lee,2014-12-05
Edited in collaboration with the Grassmann Research Group this book contains many important articles delivered at the ICM 2014 Satellite Conference and the 18th International Workshop on Real and Complex Submanifolds which was held at the National Institute for Mathematical Sciences Daejeon Republic of Korea August 10-12 2014 The book covers various aspects of differential geometry focused on submanifolds symmetric spaces Riemannian and Lorentzian manifolds and Kähler and Grassmann manifolds **Geometric and Harmonic Analysis on Homogeneous Spaces and Applications** Ali

Baklouti,Hideyuki Ishi,2021-10-29 This book collects a series of important works on noncommutative harmonic analysis on homogeneous spaces and related topics All the authors participated in the 6th Tunisian Japanese conference Geometric and Harmonic Analysis on homogeneous spaces and Applications held at Djerba Island in Tunisia during the period of December 16-19 2019 The aim of this conference and the five preceding Tunisian Japanese meetings was to keep up with the active development of representation theory interrelated with various other mathematical fields such as number theory algebraic geometry differential geometry operator algebra partial differential equations and mathematical physics The present volume is dedicated to the memory of Takaaki Nomura who organized the series of Tunisian Japanese conferences with great effort and enthusiasm The book is a valuable resource for researchers and students working in various areas of analysis geometry and algebra in connection with representation theory *Calculus and Mechanics on Two-Point Homogeneous Riemannian Spaces* Alexey V. Shchepetilov,2006-09-04 Mathematics develops both due to demands of other sciences and due to its

internal logic The latter fact explains the attention of mathematicians to many problems which are in close connection with basic mathematical notions even if these problems have no direct practical applications It is well known that the space of constant curvature is one of the basic geometry notion 208 which induced the wide field for investigations As a result there were found numerous connections of constant curvature spaces with other branches of mathematics for example with integrable partial differential equations 36 153 189 and with integrable Hamiltonian systems 141 Geodesics on compact surfaces of a constant negative curvature with the genus 2 generate many test examples for ergodic theory see also 3 183 and the bibliography therein The hyperbolic space H^3 is the space of velocities in special relativity see Sect 7 4 1 and also arises as space like sections in some models of general relativity

Open Problems in Algebraic Combinatorics

Christine Berkesch, Benjamin Brubaker, Gregg Musiker, Pavlo Pylyavskyy, Victor Reiner, 2024-08-21 In their preface the editors describe algebraic combinatorics as the area of combinatorics concerned with exact as opposed to approximate results and which puts emphasis on interaction with other areas of mathematics such as algebra topology geometry and physics It is a vibrant area which saw several major developments in recent years The goal of the 2022 conference Open Problems in Algebraic Combinatorics 2022 was to provide a forum for exchanging promising new directions and ideas The current volume includes contributions coming from the talks at the conference as well as a few other contributions written specifically for this volume The articles cover the majority of topics in algebraic combinatorics with the aim of presenting recent important research results and also important open problems and conjectures encountered in this research The editors hope that this book will facilitate the exchange of ideas in algebraic combinatorics
