Researching Accounting Education Richard M.S. Wilson, 2016-04-14 There is no doubt that accounting education scholarship and research in Australia is not only thriving but is amongst the best in the world. Nor is there any doubt that Australian scholars in this field punch well above their weight within the international arena. This book is not derived from a conventional special issue, i.e. one focussing on a specific theme such as audit education, communication in accounting education, or the interface between accounting education and professional training. Instead, it presents a collection of leading edge contributions to accounting education research from Australian scholars on topics which have international relevance. These topics reflect the typical breadth of research in this field being undertaken in Australia, including coverage of students' conceptions of accounting work, the impact of entry mode on accounting students, approaches to learning, listening skills in accounting practice, and students' performance in online accounting courses. Taken together, the contents of this book will help to enhance the educational base of accounting practice by providing guidance to educators in improving their pedagogic practice. This book was originally published as a special issue of *Accounting Education*, an international journal. [Books in Print](#), 1994. [Whitaker's Book List](#), 1988. [Human versus Machine: Accounting, Auditing and Education in the Era of Artificial Intelligence](#) Joanna Dyczkowska, 2024-09-19 The present book provides a critical reflection on the state and perspectives of the accountancy and auditors profession, addresses the AI technology's supportive role in accounting and auditing tasks, reporting processes, and reports attestation, as well as stresses the necessity to modify educational curriculums in business accounting in response to changing circumstances and set the regulatory frameworks regarding the use of generative AI by academics and students. The considerations covered in the book are timely and can be helpful for business practitioners, academics, and students. Moreover, the international context of the publication, reference to the latest literature on AI applications in business accounting, and presented research study can make this work valuable for all those interested in the opportunities and threats that AI may bring into the professional lives of many.
