Acoustical Perspective On Ragarasa Theory:

Acoustical Perspective on Raga-rasa Theory Suvarnalata Rao, 2000 Illustrations 2 B w Illustrations and 54 Graphs

Description Rasa as an aesthetic experience has always been a dominant feature of art and art criticism in India This study examines rasa as related to Indian music specially the raga A new approach has been made for understanding the complex issue of raga rasa relation wherein theories and tools of modern scientific technology have been employed This may perhaps be the first work in recent times to examine the aspects of intonation and melodic movement in the actual performance context using very sensitive computer software A specially innovative section of the book deals with a detailed comparison between Indian and Western viewpoints on the issue of music and emotion The exhaustive literature survey presented on the subject of raga rasa provides excellent source material on the subject It includes the historical evolution of rasa as applied to various aspects of Indian music Although no specificity in terms of a particular rasa can be attached to the aesthetic experience associated with a raga this study reassures that the principles inherent in a raga and their aesthetic capabilities are not mere theoretical norms but a reality leading to the blissful experience of rasa

Semiosis in Hindustani Music José Luiz Martinez, 2001-01-01 For thousands of years music in India has been considered a signifying art Indian music creates and represents meanings of all kinds some of which extend outwardly to the cosmos while others arise inwardly in the refined feelings which a musical connoisseur experiences when listening to it In this book the author explores signification in Hindustani classical music along a two fold path Martineq first constructs a theory of musical semiotics based on the sign theories of Charles Sanders Peirce He then applies his theory to the analysis of various types of Hindustani music and how they generate significations The author engages such fundamental issues as sound quality raga tala and form while advancing his unique interpretations of well known semiotic phenomena like iconicity metalanguage indexicality symbolism Martinez s study also provides deep insight into semiotic issues of musical perception performance scholarship and composition An specially innovative and extensive section of the book analyzes representations in Hindustani music in terms of the Indian aesthetic theory of rasa The evolution of the rasa system as applied to musical structures is traced historically and analyzed semiotically In the light of Martinez s theories Hindustani music reveals itself to be both a delightfully sensuous and highly sophisticated system of acoustic representations

RASA Marc Benamou, 2010-09-20 The complex notion of rasa as understood by Javanese musicians refers to a combination of various qualities including taste feeling affect mood sense inner meaning a faculty of knowing intuitively and deep understanding This leaves us with a number of questions how is rasa expressed musically Who or what has rasa and what sorts of musical psychological perceptual and sociological distinctions enter into this determination How is the vocabulary of rasa structured and what does this tell us about traditional Javanese music and aesthetics In this first book on the subject Rasa provides an entry into Javanese music as it is conceived by the people who know the tradition best the musicians themselves In one of the most thorough explorations of local aesthetics to

date author Marc Benamou argues that musical meaning is above all connotative hence not only learned but learnable Following several years performing and researching Javanese music in the regional and national cultural center of Solo Indonesia Benamou untangles the many meanings of rasa as an aesthetic criterion in Javanese music particularly in court and court derived gamelan traditions While acknowledging that certain universal psychological tendencies may inspire parallel interpretations of musical meaning Rasa demonstrates just how culturally specific such accrued shared meanings can be

Computer Assisted Music and Dramatics Ambuja Salgaonkar, Makarand Velankar, 2023-06-24 This book is intended for researchers interested in using computational methods and tools to engage with music dance and theatre The chapters have evolved out of presentations and deliberations at an international workshop entitled Computer Assisted Music and Dramatics Possibilities and Challenges organized by University of Mumbai in honour of Professor Hari Sahasrabudde a renowned educator and a pioneering computational musicologist CM of Indian classical music The workshop included contributions from CM as well as musicians with a special focus on South Asian arts The case studies and reflective essays here are based on analyses of genres practices and theoretical constructs modelled computationally They offer a balanced and complementary perspective to help innovation in the synthesis of music by extracting information from recorded performances This material would be of interest to scholars of the sciences and humanities and facilitate exchanges and generation of ideas

Indian Classical Music and the Gramophone, 1900-1930 Vikram Sampath, 2022-06-30 In 1902 The Gramophone Company in London sent out recording experts on expeditions across the world to record voices from different cultures and backgrounds All over India it was women who embraced the challenge of overcoming numerous social taboos and aesthetic handicaps that came along with this nascent technology Women who took the plunge and recorded largely belonged to the courtesan community called tawaifs and devadasis in North and South India respectively Recording brought with it great fame brand recognition freedom from exploitative patrons and monetary benefits to the women singers They were to become pioneers of the music industry in the Indian sub continent However despite the pioneering role played by these women their stories have largely been forgotten Contemporaneous with the courtesan women adapting to recording technology was the anti nautch campaign that sought to abolish these women from the performing space and brand them as common prostitutes A vigorous renaissance and arts revival movement followed leading to the creation of a new classical paradigm in both North Indian Hindustani and South Indian Carnatic classical music This resulted in the standardization universalization and institutionalization of Indian classical music This newly created classical paradigm impacted future recordings of The Gramophone Company in terms of a shift in genres and styles Vikram Sampath sheds light on the role and impact of The Gramophone Company s early recording expeditions on Indian classical music by examining the phenomenon through a sociocultural historical and musical lens The book features the indefatigable stories of the women and their experiences in adapting to recording technology The artists from across India featured are Gauhar Jaan of Calcutta Janki Bai

of Allahabad Zohra Bai of Agra Malka Jaan of Agra Salem Godavari Bangalore Nagarathnamma Coimbatore Thaiy Dhanakoti of Kanchipuram Bai Sundarabai of Pune and Husna Jaan of Banaras **Untimely Bollywood** Amit S. Journal of the Indian Musicological Society Indian Musicological Society,1992 *Hindustani Music* Deepak Raja,2005 It Is A Wide Ranging Survey Of The North Indian Tradition Of Classical Music During The Post Independence Period The Book Is Divided Into Six Parts Which Based On The Author S Vast Experiences Make Complex Musicological Concepts Accessible To Non Academic Readers **Bibliography of Doctoral Dissertations** ,1993 **Indian Books in Print** ,2003 **Notes** Music Library Association,2002 **Actes du Colloque Musique et assistance informatique** ,1992 **Fourier Acoustics** Earl G. Williams,1999-06-16 Fourier Acoustics develops the theory of sound radiation completely from the viewpoint of Fourier analysis This powerful perspective of sound radiation provides the reader with a comprehensive and practical understanding which will enable him or her to diagnose and solve sound and vibration problems of the 21st century As a result of this perspective Fourier Acoustics is able to present thoroughly and simply for the first time in book form the theory of nearfield acoustical holography an important technique which has revolutionized the measurement of sound The book includes The physics of wave propagation and sound radiation in homogeneous media Acoustics such as radiation of sound and radiation from vibrating surfaces Inverse problems for example the thorough development of the theory of nearfield acoustical holography Mathematics of specialized functions such as spherical harmonics The author is an internationally recognized acoustician whose pioneering research in the field of nearfield acoustical holography has impacted acoustics research and development throughout the world Dr Williams research has been formally recognized by NRL as one of its most innovative technologies over the past 75 years Relying little on material outside the book Fourier Acoustics will be invaluable as a graduate level text as well as a reference for researchers in academia and industry The book is unique amongst acoustics texts it is well illustrated and it includes exercises to enforce the theory *Acoustical Analysis of the Tanpura* Asoke Kumar Datta,Ranjan Sengupta,Kaushik Banerjee,Dipak Ghosh,2018-10-01 This book addresses the acoustic signal analysis and spectral dynamics of the tanpura an Indian plucked string instrument In addition it strives to provide a logical and objective explanation of Indian classical musicians cognitive experience Issues of relevance in this regard include the rich mellifluous sound the undulation of the loudness the somewhat cyclical variation of the timbre which is strongly related to these undulations and the occasional perception of virtual notes to which no strings are tuned The book analyses the materials used in the tanpura the instrument s simple structure the intricacies of the lower bridge and the theory of string vibration with variable string length Cognitive experiments to provide the basis for perceptual quality assessment as well as a methodology for ranking are described This is followed by acoustic analyses both temporal and spectral for sounds

produced by male and female tanpuras for each individual string and the combined one. An important aspect related to the naturalness of perceived sound, namely the intrinsically associated random perturbations, is also discussed. The apparent irregularities perceived in the acoustic signal produced by the tanpura reveal the importance of examining the signal from the perspective of non-linear analysis, an aspect that is also covered in the book. Given its scope, the book will appeal to students and researchers in the fields of music acoustics, artificial intelligence, and cognitive science, as well as musicians and musicologists around the world.
