crucibles of biodiversity in the face of climate change Although tropical forests cover less than 10 percent of Earth's land surface they are home to about two thirds of the planet's terrestrial biodiversity Unfortunately a ballooning human population has severely damaged half of the planet's pristine ecosystems and the biodiversity they contained leading to an unfolding sixth mass extinction In Joseph Conrad's famous 1899 novella *Heart of Darkness* he described the Congo River as a great snake More than a century later herpetologist evolutionary biologist and seasoned expedition leader Eli Greenbaum set out to find the Democratic Republic of the Congo's Congo for short incredible diversity of serpents in the flesh along with the country's rarest frogs lizards crocodiles and turtles which live in and along Africa's second largest river For a biologist an expedition into the heart of the Congo is a priceless gift with its incredible species known and unknown lurking around every bend in the river But the Congo is also a place of endemic political instability widespread corruption human suffering and extraordinary danger These as much as the challenges of the natural world confront any scientist doing field work in the Congo *Venomous River* is the harrowing story of a biodiversity scientist's successful quest to discover several new amphibian and reptile species in the remotest heart of Africa a wilderness where he encounters friendly peoples a cook who is revealed to be a dangerous killer highly venomous snakes and scorpions deadly tropical diseases and troubling echoes of the Congo's colonial history
