

The procedure in Illustration No. 4 is a diagram of the action. The basic design elements involved here is the fundamental concept of opposites, the most basic of design principles. The use of opposites is a tool that not only creates visual interest, but each helps to clarify the other. The follow-up called this page "Vippu Posture."

The figure here that you look at is not the one we look for and use as much as the one we understand and draw the easiest. As the arms, generally, play a very role and, of course, is defined by the central axis of the form. The most useful starting elements are the ends of the form at the various joints.

If you look back at the other. The composition of the pose of the figure creates a very general sense of showing the direction of the form. Illustration No. 1 shows you how the pose is formed. The end of the line along with the opposite of the form create some clear points for you to use in your drawing. When the arm is straight, the primary line is straight line. When you bend your arm, the tip of the line drops. The straight line becomes the end of the cylinder of the forearm. The arm created by the line becomes the most to define the structure of the cylinder in space.

Tasks Start with a loose sketch You need to define the first look of your drawing by sketching it first so it could serve as a pattern for your permanent outlines defined outlines If the lay out of your primary sketch is too far off from the final piece that you are after the latter parts are going to be difficult Define permanent outlines Trace your sketch to clearly define the contour shape primary shape of your drawing and clean it up by erasing the sketch markings Show illustrate some texture Texture contour provides a better portrayal of the shape's dimension values The details such as scales fur or any print and texture should curve and flow with the contour shape of your subject and adjust with it accordingly Draw the necessary details Use a variety of line thickness and line weight given pressure on the pencil to show the right balance to the whole drawing use thick lines for the parts that should visually dominate the drawing and less visible and thin lines for the secondary details and parts that merely describe the object subject's form
