Advanced Quantum Mechanics Freeman J. Dyson, David Derbes, 2011 Renowned physicist and mathematician Freeman Dyson is famous for his work in quantum mechanics nuclear weapons policy and bold visions for the future of humanity In the 1940s he was responsible for demonstrating the equivalence of the two formulations of quantum electrodynamics OCo Richard Feynman's diagrammatic path integral formulation and the variational methods developed by Julian Schwinger and Sin Itiro Tomonaga OCo showing the mathematical consistency of QED This invaluable volume comprises the legendary lectures on quantum electrodynamics first given by Dyson at Cornell University in 1951 The late theorist Edwin Thompson Jaynes once remarked OCo For a generation of physicists they were the happy medium clearer and better motivated than Feynman and getting to the point

faster than Schwinger. This edition has been printed on the 60th anniversary of the Cornell lectures and includes a foreword by science historian David Kaiser as well as notes from Dyson's lectures at the Les Houches Summer School of Theoretical Physics in 1954. The Les Houches lectures described as a supplement to the original Cornell notes provide a more detailed look at field theory, a careful and rigorous derivation of Fermi's Golden Rule and a masterful treatment of renormalization and Ward's Identity. Future generations of physicists are bound to read these lectures with pleasure, benefiting from the lucid style that is so characteristic of Dyson's exposition.

Lectures Of Sidney Coleman On Quantum Field Theory: Foreword By David Kaiser
Bryan Gin-ge Chen, David Derbes, David Griffiths, Brian Hill, Richard Sohn, Yuan-sen Ting, 2018-11-08. Sidney Coleman was the master teacher of quantum field theory. All of us who knew him became his students and disciples. Sidney's legendary course remains fresh and bracing because he chose his topics with a sure feel for the essential and treated them with elegant economy. Frank Wilczek, Nobel Laureate in Physics 2004. Sidney Coleman was a physicist's physicist. He is largely unknown outside of the theoretical physics community and known only by reputation to the younger generation. He was an unusually effective teacher, famed for his wit, his insight, and his encyclopedic knowledge of the field to which he made many important contributions. There are many first-rate quantum field theory books: the venerable Bjorken and Drell, the more modern Itzykson and Zuber, the now standard Peskin and Schroeder, and the recent Zee, but the immediacy of Prof. Coleman's approach and his ability to present an argument simply without sacrificing rigor makes his book easy to read and ideal for the student. Part of the motivation in producing this book is to pass on the work of this outstanding physicist to later generations, a record of his teaching that he was too busy to leave himself.

Rendering Life Molecular Natasha Myers, 2015-08-27. What are living bodies made of? Protein modelers tell us that our cells are composed of millions of proteins intricately folded, molecular structures on the scale of nanoparticles. Proteins twist and wriggle as they carry out the activities that keep cells alive. Figuring out how to make these unruly substances visible, tangible, and workable is a challenging task, one that is not readily automated even by the fastest computers. Natasha Myers explores what protein modelers must do to render three-dimensional atomic-resolution models of these lively materials. *Rendering Life Molecular* shows that protein models are not just informed by scientific data; model building entangles a modeler's entire sensorium, and modelers must learn to feel their way through the data in order to interpret molecular forms. Myers takes us into protein modeling laboratories and classrooms, tracking how gesture affects imagination and intuition, shape practices of objectivity. Asking, "What is life becoming in modelers' hands?" she tunes into the ways they animate molecules through their moving bodies and other media. In the process, she amplifies an otherwise muted liveliness, inflecting mechanistic accounts of the stuff of life.

the unconventional ways we communicate what we know about society to others Becker explores the many ways knowledge about society can be shared and interpreted through different forms of telling fiction films photographs maps even mathematical models many of which remain outside the boundaries of conventional social science Eight case studies including the photographs of Walker Evans the plays of George Bernard Shaw the novels of Jane Austen and Italo Calvino and the sociology of Erving Goffman provide support for Becker's argument that every way of telling about society is perfect for some purpose The trick is as Becker notes to discover what purpose is served by doing it this way rather than that From publisher description *Shifting Paradigms* Alexander Blum,Christian Joas,Kostas Gavroglu,Jürgen Renn (ed.),2016 The publication of Thomas S Kuhn's *Structure of Scientific Revolutions* in 1962 stands for a turning point in the history and philosophy of science The repercussions of this work have rearticulated the theoretical framework of history and philosophy of science and have also generated discussions that contributed to the formation of the communities of historians as well as philosophers of science in many parts of the world Different approaches to history of science have since emerged and most of them have the *Structure* as their reference point In October 2012 a conference at the Max Planck Institute for the History of Science brought together some of the historians of science whose work has played a decisive role in the ways history of science has evolved as a field of research in the past 50 years both intellectually and institutionally This volume gathers reflections by many of these historians on the history of the history of science based on the presentations and discussions at the conference The topics covered range from personal recollections of working with Thomas Kuhn to broad overviews of the historical development of the history of science as a discipline in the past half century The series *Proceedings of the Max Planck Research Library for the History and Development of Knowledge* presents the results of scientific meetings on current issues and supports further cooperation on these issues via an electronic platform The volumes are available both as print on demand books and as open access publications on the Internet The material is freely accessible online at www.edition-open-access.de *Historical Studies in the Physical and Biological Sciences*,2005 *Scientific Cultures - Technological Challenges* Klaus Benesch,Meike Zwingenberger,2009 In 11 original essays highly reputed scholars from both the United States and Europe take a fresh look at the plurality of contemporary scientific cultures and their respective methodologies and discursive practices While some investigate recent advancements in life and computer sciences nanotechnologies robotics genetic coding electronic communication and databases etc and their repercussions in the social and political field others discuss new approaches especially in the humanities that may help to bridge the gulf between the two cultures C P Snow and open up new perspectives for cross cultural fertilization Each essay if to varying degrees also probes the regulatory political and institutional mechanisms that determine both the success and public acceptance and reputation of specific scientific cultures particularly with respect to scientific ethics and the frequently invoked moral obligation of scientists and researchers **Modeling and Parameter Estimation of Contact Processes** Ariel Cintron-Arias,2006
