Monitoring and Controlling the International Transfer of Technology James Bonomo, 1998 The United States is a net exporter of technology and technical knowledge Despite fears that this outflow of technology is costly to U S taxpayers it would be impractical to institute a government wide system for monitoring and restricting overseas technology transfers First a review of the economic effects of technology transfer showed that it is not possible to estimate accurately the financial effect on the United States of the international transfer of government sponsored technology Moreover the methods of transfer that might be monitored or restricted are also sources of the valuable high domestic societal return to government investments in research and development Finally government agencies do not see international technology transfer issues as central to their missions and are likely to see new requirements as constraints on their ability to carry out their missions The authors thus recommend no major policy shifts but do suggest some changes in existing policy that would enhance the U S government's ability to trace and to capture the benefits of certain technical innovations

International Technology Transfer Nathan Rosenberg, Claudio Frischtak, 1985 For many years it was assumed that technology transfer would prove an unqualified answer for the problems of the developing nations vastly simplifying and accelerating their rate of economic development The papers in this volume question these assumptions demonstrating how technology transfer can be very costly and that success is contingent upon a variety of factors including the direction of indigenous technology and the political setting of the recipient country
