# CABLE MODEM/ROUTER WITH WIRELESS-N QUICK START

This Quick Start describes how to connect the Cable Modem/Router with Wireless-N to a cable modem service as an Internet gateway for computers and/or other local wireless or Ethernet-capable devices. More detailed information, including information about advanced features, is in the User Manual on the CD.

## Package Contents

- Cable modem/router
- Power cord
- Ethernet RJ-45 cable
- CD with User Manual

## Before Installing Your Cable Modem

Your cable service provider needs to know your modem's **MAC ADDRESS**, which is printed on a label on the bottom of your modem. You can provide this when you order cable modem service or if you already installed one by calling the cable company (SOHO) installing your modem. You may also be asked for your cable modem's model name and number, which is **DOCSIS 2.0**. If you have the modem's **serial number**, you can find it over the MAC address on the modem's label.

## System Requirements

- The need for Internet/Ethernet cable modem service that uses one of the popular DOCSIS standards - 1.0, 1.1, or 2.0. If you need to get cable modem service, please speak with your cable service provider.
- To use this Quick Start, you need a computer, an iPad® or another tablet.

If your cable service provider provided a cable modem starter kit, please continue below. If you don't have or choose not to use the cable modem starter kit from your service provider, go to **How to connect to a computer if you don't have or choose not to use a cable modem starter kit**.

## If your cable service provider provided a cable modem starter kit

Some cable service providers supply a cable modem starter kit that can be useful when you install your cable modem. The kit may include a coaxial cable for connecting between a wall jack and your cable modem. (There are also available at most electronics retailers.) The kit can include instructions, and may also include a CD with software. If you received a kit like this, we recommend that you read the kit's instructions and use them to install your Cable cable modem/router. The modem is DOCSIS 2.0 certified by CableLabs, and connects like a normal cable modem.

You will need to plug in the modem's power cord, connect its cable modem service using a coaxial cable, and then connect to a computer using either the included CD and/or one of the sections below (see **Using the Cable Modem/Router to Make a Wireless Connection**).

**Note:** Please refer to the **Hardware Connection** section if you would like to see a diagram of the back of the cable modem and a description of the connections.

After you have installed your cable modem and it has synchronized itself with the cable network, your cable modem can connect your computer to the Internet.

**Note:** Allow 2 to 10 minutes to power up the first time because the cable modem/router must locate and connect to the appropriate channels for communication. You'll see the **CM**, **5G**, and/or **Online** modem lights flashing until the Online light stops blinking green to signal success.

Now open your browser and go to a familiar Web site to check that the cable modem is working.

- If you want to connect the modem/router wirelessly to some devices, see **Connecting the Cable Modem/Router Wirelessly to Some Device**.
- If you want to connect additional computers/devices using the modem/router's Ethernet LAN ports, please see **Read This Only if You Are Connecting Additional Computers and/or Other Devices to the Cable Modem/Router's Ethernet ports**.
- If you want to configure advanced options, please refer to the User Manual on the CD.

## How to connect to a computer if you don't have or choose not to use a cable modem starter kit

1. Be sure your computer is on and the cable modem is unplugged.
   **Note:** Please refer to the **Hardware Connection** section if you would like to see a diagram of the back of the cable modem and a description of the connections, or you can read the following steps.
2. Connect one end of the coaxial cable to the cable outlet in the wall. Connect the other end of the coaxial cable to the **Cable** connection on the rear panel of the cable modem. Hand-tighten the connections to avoid damaging them.
   - You can connect a coaxial cable between an open cable service wall jack and the cable modem. (Once set up is complete, you can use a coaxial T-connector or splitter.)
   - Alternatively, there may already be a coaxial cable that is connected to service and that has an open end for connecting to the cable modem.
3. Plug the power cord into the **AC IN** connector on the rear panel of the cable modem and into the electrical outlet. This turns the cable modem on. Check that the **Power** LED lights up.
4. The instructions are recommend that you connect the provided Ethernet cable to any **Gigabit Ethernet** port (1/2, 1 and 1, 2, 3, or 4) on the rear panel of the cable modem/router and connect the other end to the Ethernet port on your computer. If you want to connect your computer wirelessly instead, see **Connecting the Cable Modem/Router Wirelessly to Some Device**.

   **Note:** Allow 2 to 10 minutes to power up the first time because the cable modem must locate and connect to the appropriate channels for communication. You'll see the **CM**, **5G**, and/or **Online** modem lights flashing until the Online light stops blinking green to signal success.

Now open your browser and go to a familiar Web site to check that the cable modem is working.

- If you want to connect the modem/router wirelessly to some devices, see **Connecting the Cable Modem/Router Wirelessly to Some Device**.
- If you want to connect additional computers/devices using the modem/router's Ethernet LAN ports, please see **Read This Only if You Are Connecting Additional Computers and/or Other Devices to the Cable Modem/Router's Ethernet ports**.
- If you want to configure advanced options, please refer to the User Manual on the CD.

## Placement Guidelines

- Do not place the modem/router on its side.
- Do not place the modem/router where it may become very cold.
- Place the cable modem/router in a central location (using the "feet" on the bottom of the unit is ideal) to minimize cable placements. The Power LED on the front panel should be on the top of the unit.

## Hardware Connection

| Part | Description |
|---|---|
| **10/100/1000 Ethernet 1-4** | Your computer and networking devices (up to 4) connect to these ports. |
| **USB** | For USB ports for manufacturer's use only. |
| **RESET** | Use this button in the unlikely event that you want to restore the default factory settings. Then, restore, or reconnect to, your cable modem/router. |
| **Cable** | Connect your coaxial cable line to this port. |
| **AC IN** | Connect the supplied power cord to this port. |

## Connecting the Cable Modem/Router Wirelessly to Some Device

Your cable modem/router has enabled Wi-Fi® compatible connection to your computer and other devices. The cable modem/router comes set up to protect with WPA/WPA2 security, and this can be changed if you like.

For more computers and/or devices that support WPS, see **Using WPS to set up your wireless network**. (Windows 7 XP / Service Pack 3) or the latest versions of Windows Vista (Service Pack 2) support WPS. For those computers and/or devices that do support WPS/WPA2 but that don't support WPS, write the default SSID and Pre-Shared Key below in the wireless network section of the device's configuration menus.

**Note:** Typically, network devices that don't support WPS but do support WPA/WPA2.

### Default Wireless Security Settings

The **default SSID** is: ZCOM
The **default Pre-Shared Key** is: xxxxxxxx (where xxxx represents the last 8 characters of the **Cable MAC address** of the unit which can be found on the label on the bottom of the cable modem/router.

**Note:** If you want to change the default SSID and Pre-Shared Key, please refer to the User Manual on the CD for instructions.

If the utility asks if you want to turn on file and printer sharing, please refer to the User Manual on the CD for instructions on how to configure your network.

## Using WPS to set up your wireless network

If all the Wi-Fi compatible wireless devices on your network support WPS:

1. Press the **WPS** (LED) button on the front panel of the router for 3 seconds. The WPS LED should start green.
2. Within 2 minutes (before the WPS LED light turns off), press the WPS button on the device that you're linking wirelessly to the modem/router. The button may be a physical pushbutton on the device or a button on a page of the device's wireless network configuration menus.
3. **Congratulations!** You should now have a secure connection between the router and a device. Now is a good time to check that your device's Internet connection is working. Open your browser and go to a familiar Web site. If you are unable to connect, continue with the next step below.
   If you are not able to connect to the Internet, go to **Troubleshooting Tips**.
4. If you have other devices whose WPS security you want to set, repeat steps 1 through 3 for each device. When they are all set, go to step 5.
5. Your router setup for most wireless devices is complete.

**Note:** If you want to change the default SSID and Pre-Shared Key, please refer to the User Manual on the CD for instructions.
