Aeolian Environments Sediments And Landforms:

Aeolian Environments, Sediments and Landforms Andrew S. Goudie, Ian Livingstone, Stephen Stokes, 1999 Based on keynote addresses presented at the International Aeolian Conference in Oxford in July 1998 this book is the latest title in the British Geomorphological Research Group series It provides a general overview of aeolian geomorphology and sedimentology including a historical analysis of the main trends in the development of ideas of the last 60 years Discussions include the physics of aeolian movement and the evidence used to identify and interpret aeolian sediments in the stratigraphic column desert and coastal dune processes the extent and role of wind erosion in the degradation of agricultural land and much more

Arid and Semi-Arid Geomorphology Andrew Goudie, 2013-05-27 A global analysis of landforms of deserts and the processes that mould them for advanced students and researchers

Handbook of Chemical Mass Transport in the Environment Louis J. Thibodeaux, Donald Mackay, 2010-10-21 A comprehensive account of the state of the science of environmental mass transport Edited by Louis J Thibodeaux and Donald Mackay renowned experts in this field the Handbook of Chemical Mass Transport in the Environment covers those processes which are critically important for assessing chemical fate exposure and risk In a comprehensive and authoritative format this unique handbook provides environmental chemists geoscientists engineers and modelers with the essential capabilities to understand and quantify transport In addition it offers a one stop resource on environmental mass transfer and mass transport coefficient estimation methods for all genres The book begins by discussing mass transport fundamentals from an environmental perspective It introduces the concept of mobility key to environmental fate since transport must occur prior to any reaction or partitioning within the natural multimedia compartments The fugacity approach to environmental mass transfer and the conventional approach are examined This is followed by a description of the individual mass transport processes and the appropriate flux equations required for a quantitative expression The editors have identified 41 individual processes believed to be the most environmentally significant which form the basis for the remainder of the book Using a consistent format for easy reference each chapter Introduces the specific processes Provides a detailed qualitative description Presents key theoretical mathematical formulations Describes field or laboratory measurements of transport parameters Gives data tables and algorithms for numerical estimates Offers a guide for users familiar with the process who are seeking a direct pathway to obtain the numerical coefficients Presents computed example problems case studies and or exercises with worked through solutions and answers The final chapter presents the editors insight into future needs and emerging priorities Accessible and relevant to a broad range of science and engineering users this volume captures the state of the transport science and practice in this critical area

Encyclopedia of Geomorphology Andrew Goudie, 2013-04-15 Geomorphology the discipline which analyzes the history and nature of the earth's surface deals with the landforms produced by erosion weathering deposition transport and tectonic processes In recent decades there have been major developments in the discipline and

these are reflected in this major Encyclopedia the first such reference work in the field to be published for thirty five years Encyclopedia of Geomorphology has been produced in association with the International Association of Geomorphologists IAG and has a truly global perspective The entries have been written by an international editorial team of contributors drawn from over thirty countries who are all among the leading experts in the discipline In two lavishly illustrated volumes Encyclopedia contains nearly 700 alphabetically organized entries to provide a comprehensive guide both to specific landforms and to the major types of geomorphological processes that create them The Encyclopedia also demonstrates the major developments that have taken place in recent years in our knowledge of tectonic and climatic changes and in the use of new techniques such as modelling remote sensing and process measurement Older concepts however are not forgotten and provide an historical perspective on the development of ideas Both accessible and authoritative Encyclopedia of Geomorphology is destined to become the definitive resource for students researchers and applied practitioners in the field of geomorphology and the cognate disciplines of geography earth science sedimentology and environmental science

Encyclopedia of Environmental Change John A Matthews, 2013-12-13 Accessibly written by a team of international authors the Encyclopedia of Environmental Change provides a gateway to the complex facts concepts techniques methodology and philosophy of environmental change This three volume set illustrates and examines topics within this dynamic and rapidly changing interdisciplinary field The encyclopedia includes all of the following aspects of environmental change Diverse evidence of environmental change including climate change and changes on land and in the oceans Underlying natural and anthropogenic causes and mechanisms Wide ranging local regional and global impacts from the polar regions to the tropics Responses of geo ecosystems and human environmental systems in the face of past present and future environmental change Approaches methodologies and techniques used for reconstructing dating monitoring modelling projecting and predicting change Social economic and political dimensions of environmental issues environmental conservation and management and environmental policy Over 4 000 entries explore the following key themes and more Conservation Demographic change Environmental management Environmental policy Environmental security Food security Glaciation Green Revolution Human impact on environment Industrialization Landuse change Military impacts on environment Mining and mining impacts Nuclear energy Pollution Renewable resources Solar energy Sustainability Tourism Trade Water resources Water security Wildlife conservation The comprehensive coverage of terminology includes layers of entries ranging from one line definitions to short essays making this an invaluable companion for any student of physical geography environmental geography or environmental sciences

Treatise on Geomorphology, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology

ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth s surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth s diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

Dryland Climatology Sharon E. Nicholson, 2011-10-27 A comprehensive review of dryland climates and their relationship to the physical environment hydrology and inhabitants Chapters are divided into five major sections on background meteorology and climatology the nature of dryland climates in relation to precipitation and hydrology the climatology and climate dynamics of the major dryland regions on each continent and life and change in the world s drylands It includes key topics such as vegetation geomorphology desertification micro habitats and adaptation to dryland environments This interdisciplinary volume provides an extensive review of the primary literature covering nearly 2000 references and the conventional and satellite datasets that form key research tools for dryland climatology Illustrated with

over 300 author photographs it presents a unique view of dryland climates for a broad spectrum of researchers environmental professionals and advanced students in climatology meteorology geography environment science earth system science ecology hydrology and geomorphology

Geological Monitoring Rob Young, Lisa Norby, 2009 Geologic Monitoring is a practical nontechnical guide for land managers educators and the public that synthesizes representative methods for monitoring short term and long term change in geologic features and landscapes A prestigious group of subject matter experts has carefully selected methods for monitoring sand dunes caves and karst rivers geothermal features glaciers nearshore marine features beaches and marshes paleontological resources permafrost seismic activity slope movements and volcanic features and processes Each chapter has an overview of the resource summarizes features that could be monitored describes methods for monitoring each feature ranging from low cost low technology methods that could be used for school groups to higher cost detailed monitoring methods requiring a high level of expertise and presents one or more targeted case studies Publisher's description

Geochemical Sediments and Landscapes David J. Nash, Sue J. McLaren, 2007-12-03 Offering a review of terrestrial geochemical sedimentology this volume contains chapters which summarize the main characteristics of the sediments morphological chemical and mineralogical It also addresses the distribution mechanisms of formation or accumulation and relationships to other terrestrial geochemical sediments

Process Geomorphology Dale F. Ritter, R. Craig Kochel, Jerry Russell Miller, 2006

Deserts and Desert Environments Julie Laity, 2008-11-10 Taking a global perspective this book provides a concise overview of drylands including their physical biological temporal and human components Examines the physical systems occurring in desert environments including climate hydrology past and present lakes weathering hillslopes geomorphic surfaces water as a geomorphic agent and aeolian processes Offers an accessible introduction to the physical biological temporal and human components of drylands Investigates the nature environmental requirements and essential geomorphic roles of plants and animals in this stressful biological environment Highlights the impact of human population growth on climate desertification water resources and dust storm activity Includes an examination of surface atmosphere interactions and the impact of ENSO events

Past Glacial Environments John Menzies, 1996 This undergraduate textbook provides a current and comprehensive survey of the sediments and forms generated within Pleistocene and pre Pleistocene glacial environments Techniques and methods used in the examination of these sediments and forms are extensively reviewed This is the most comprehensive and wide ranging book ever prepared on this topic and will form the basis for future work in the area In

studying past glacial environments links are made between understanding modern glaciodynamics ice physics and the processes of erosion transport and deposition of glacial sediments and the generation of various glacial landforms Past Glacial Environments presents physical geography earth and environmental science students with an extensive review of the latest research on past glacial environments The text encompasses Pleistocene subglacial supraglacial and proglacial sediments and environments pre Pleistocene global glacial conditions and sediments as well as past glacioaeolian glaciolacustrine and glaciomarine sediments Subsequent chapters focus on stratigraphy lithofacies associations paleosols glacio eustasy and isostasy micromorphology SEM drift prospecting and placer mining

Principles of Sedimentology and Stratigraphy Sam Boggs,2006 A concise treatment of the fundamental principles of sedimentology and stratigraphy featuring the important physical chemical biological and stratigraphic characteristics of sedimentary rocks Emphasized are the ways in which the study of sedimentary rocks is used to interpret depositional environments changes in ancient sea level and other intriguing aspects of Earth history Topics include the origin and transport of sedimentary materials physical properties of sedimentary rocks composition classification and diagenesis of sedimentary rocks and principles of stratigraphy and basin analysis For individuals interested in one text providing comprehensive coverage of both sedimentology and stratigraphy
