Cultural Heritage and Aerobiology Paolo Mandrioli, Giulia Caneva, Cristina Sabbioni, 2013-06-29 Aerobiology is the science that studies the biological component of the atmosphere and its effects on living systems and on the environment This term was used for the first time in 1935 but the attention of scientists to the biological component of the atmosphere goes back to 1769 when the Italian biologist Spallanzani carried out a series of experiments that disproved the concept of spontaneous generation of life and proved the presence of viable microorganisms in the air Aerobiology has marked characteristics of interdisciplinarity its application fields range from respiratory diseases to the airborne outbreak of animal and vegetal diseases and to the biodegradation of substances and materials The latter is the subject of this book The purpose of aerobiological research applied to the conservation of cultural heritage is to evaluate the risk of alteration by airborne microorganisms of materials forming artefacts of historical artistic and archaeological interest Airborne spores and vegetative structures may develop on different substrates and may be a cause of degradation in relation to the types of materials the microclimatic situation and the pollution of the conservation environments The qualitative and quantitative evaluation of the biological component of air performed by means of targeted analysis campaigns and of the characteristics of materials and environments supplies indispensable information for the evaluation of the actual risk and the planning of interventions This book is divided into four main parts

Atmospheric Microbial Aerosols Bruce Lighthart, Alan Jeff Mohr, 2012-12-06 A bioaerosol is a colloidal suspension of liquid droplets or solid particles in air whose components contain or have attached to them one or more microorganisms Bioaerosols are an exciting and vital object

of study because the attached microbes play a critical role in human animal and environmental health In an era of genetically engineered microorganisms and the application of biopesticides bioaerosols are increasingly an environmental problem both indoors and outdoors and can affect entire ecosystems Atmospheric Microbial Aerosols examines naturally occurring bioaerosols as well as bioaerosols generated by human activity Included in this volume is a complete array of topics concerned with outdoor microbial bioaerosols ranging from the physical and chemical to the meteorological and microbial It will be of great interest as a starting point for researchers interested in outdoor microbial bioaerosols as well as for those interested in atmospheric dispersion models new equipment and government regulations

The Air Spora Maureen E. Lacey,Jonathan S. West,2007-02-03 The Air Spora is an illustrated guide to trapping identifying and quantifying airborne biological particles such as fungus and plant spores and pollen This book will be of use to anyone interested in aerobiology or studying applied aspects such as dispersal and effect of allergens or human animal and plant pathogens Including a comprehensive review of what is in the air and detailing the historical development of theories leading to modern aerobiology the book explains the fundamental processes behind airborne dispersal and techniques used to sample identify and quantify biological particles Methods are explained in a step by step guide for the use of standard air sampling devices Although formats applicable to modern molecular and immunological techniques are described the emphasis of the book is on simple visual identification of particles in air samples using traditional microscopy Consequently a chapter on setting up and using a light microscope is included although experienced researchers can skip to chapters showing photographs of examples of the Air Spora and nine colour plates of paintings of airborne particles at a magnification of x1000 I recommend this book to those actively running or thinking of running a pollen and spore trapping program It will also be of value to doctors allergists and those teaching the basics of palynology wishing to include a lecture or two on air spora David M Jarzen Florida Museum of Natural History In The Newsletter of the American Association Of Stratigraphic Palynologists 2007 40 2
