Aesthetics And Technology In Building:

Aesthetics and Technology in Building Pier Luigi Nervi, 1965 Here is a verbal and pictorial illustration of the credo that has guided one of the world's most distinguished architects throughout his career Architecture is and must be a synthesis of technology and art Using nearly 200 drawings and photographs including plans interesting details various stages of construction and both interior and exterior views of some of his major works Mr Nervi shows how his philosophy is put into practice Referring to most of his important projects he discusses solutions to various functional and construction requirements where he used precast and cast in place concrete emphasizing the richness of this material Mr Nervi stresses the advantages of reinforced concrete which he says allows greater flexibility and makes it easier to satisfy his triple demand of economy technical correctness and aesthetic satisfaction In predicting the future of architecture he stresses the necessity of architectural solutions that are functionally and technically sound His final remarks concern his ideas about the proper course of study for architecture students training that will produce architects with a far greater technical sense than in the past a technical sense which results in a constant search for economic efficiency
