Microsystems are an important success factor in the automobile industry In order to fulfil the customers requests for safety convenience and vehicle economy and to satisfy environmental requirements microsystems are becoming indispensable Thus a large number of microsystem applications came into the discussion With the international conference AMAA 2000 VDI VDE IT provides a platform for the discussion of all MST relevant components for automotive applications The conference proceedings gather the papers by authors from automobile suppliers and manufacturers

**Advanced Microsystems for Automotive Applications 98** Detlef E. Ricken, Wolfgang Gessner, 2013-12-14 Microsystems are an important success factor in the automobile industry In order to fulfil the customers requests for safety convenience and vehicle economy and to satisfy environmental requirements microsystems are becoming indispensable Thus a large number of microsystem applications came into the discussion Some examples are sensors for engine management exhaust and air quality control immobilizers ABS anti skid ASC and vehicle dynamics control VDC smart airbag systems and other safety applications as obstacle detection and vision enhancement With the international conference AMAA 98 VDI VDE IT provides a platform for the discussion of all MST relevant components for automotive applications The conference proceedings gather the papers by authors from automobile suppliers and manufacturers

Advanced Microsystems for Automotive Applications 2004 Jürgen Valldorf, Wolfgang Gessner, 2007-12-22 Microsystems applications MST in automobiles have become commonplace they enable the introduction of a series of new functions and at the same time the replacement of existing technologies offering improved performance and better value for money Microsystems are indispensable for fulfilling a complete transition from the mechanically driven automobile system to a mechanically based but ICT driven system as part of a likewise complex environment With the introduction of micro systems a series of challenges arise regarding complexity systems design reliability serviceability etc These challenges have to be addressed in order to meet high customer expectations concerning performance and price

**Advanced Microsystems for Automotive Applications 99** Detlef E. Ricken, Wolfgang Gessner, 2013-11-11 Microsystems are an important success factor in the automobile industry In order to fulfil the customers requests for safety convenience and vehicle economy and to satisfy environmental requirements microsystems are becoming indispensable Thus a large number of microsystem applications came into the discussion With the international conference AMAA 99 VDI VDE IT provides a platform for the discussion of all MST relevant components for automotive applications The conference proceedings gather the papers by authors from automobile suppliers and manufacturers

Advanced Microsystems for Automotive Applications 2007 Jürgen Valldorf, Wolfgang Gessner, 2007-08-17 From the beginnings of the International Forum on Advanced Microsystems for Automotive Application AMAA to the recent 11th AMAA Forum enormous progress has been made in reducing casualties emissions and in increasing comfort and performance In many cases

Microsystems provided key functions for this progress This publication is a cut out of new technological priorities in the area of microsystems based smart devices taking a mid term perspective of future smart systems applications in automobiles

**Advanced Microsystems for Automotive Applications 2008** Jürgen Valldorf,Wolfgang Gessner,2008-04-16 With the total number of vehicles steadily increasing and soon approaching one billion the world is facing serious challenges in terms of both safety of road transport and sustainability Consequently the two major persistent issues for the automotive industry are improved safety and reduced emissions The estimated number of road fatalities is about one million per year Fast growth of mobility in the developing world and an accelerated urbanisation pose high demands to the automotive industry Thanks to smart systems anticipating dangerous traffic situations road fatalities will have dropped by more than 30% from 2001 to 2010 Beyond intensive stock rearing with 30% the major contributor to climate change road traffic is one of the main sectors contributing to climate change exhaust gases from vehicle engines account for about 20% of the greenhouse gas emissions Car industry is bearing this challenge and enormous progress has been achieved particularly during the last decade

**Advanced Microsystems for Automotive Applications 2001** Sven Krueger,Wolfgang Gessner,2012-12-06 Microsystems are an important success factor in the automobile industry In order to fulfil the customers requests for safety convenience and vehicle economy and to satisfy environmental requirements microsystems are becoming indispensable Thus a large number of microsystem applications came into the discussion With the international conference AMAA 2001 VDI VDE IT provides a platform for the discussion of all MST relevant components for automotive applications The conference proceedings gather the papers by authors from automobile suppliers and manufacturers

**Advanced Microsystems for Automotive Applications 2006** Jürgen Valldorf,Wolfgang Gessner,2006-07-31 Looking back 10 years when the International Forum on Advanced Microsystems for Automotive Application AMAA started enormous progress has been made in reducing casualties emissions and in increasing comfort and performance Microsystems in many cases provided the key functions for this progress Although the issues the event concentrated on didn t change significantly safety powertrain comfort etc considerable shifts of technological paradigms and approaches can be stated The future of microsystems will consist of integrated smart systems which are able to diagnose a situation to describe and to qualify it They will be able to identify and mutually address each other They will be predictive and therefore they will be able to decide and help to decide Smart systems will enable the automobile to interact with the environment they will perform multiple tasks and assist a variety of activities Smart systems will be highly reliable often networked and energy autonomous There is a coincidence of the AMAA objectives and those of EPoSS the European Technology Platform on Smart Systems Integration contributing intensively to the development of automotive specific smart systems You will find a series of the EPoSS items in the programme of the 10th AMAA which continues to be a unique exchange forum for companies in the automotive value chain The publication in hand also reflects these issues It is a cut out of new technological priorities in the area of microsystems

2009 Gereon Meyer, Jürgen Valldorf, Wolfgang Gessner, 2009-04-15 The current economic crisis is cutting the automotive sector to the quick Public authorities worldwide are now faced with requests for providing loans and accepting guarantees and even for putting large automotive companies under state control Assessing the long term benefits of such help and weighing the needs of different sectors against each other poses a major challenge for the national policies Given the upcoming change of customer preferences and state regulations towards safety sustainability and comfort of a car the automotive industry is particularly called to prove its ability to make necessary innovations available in order to accelerate its pace to come out of the crisis Consequently the Green Car is assuming a prominent role in the current debate Various power train concepts are currently under discussion for the Green Car including extremely optimised internal combustion engines hybrid drives and battery electric traction Electrical cars are the most appealing option because they are free of local emissions and provide the opportunity to use primary energy from sources other than crude oil for transport Well to wheel analysis show that their green house gas emissions can be rated negligibly small if electricity from renewable sources like wind and solar is used
