Advanced Mineralogy A. S. Marfunin, 2012-12-06 All existing introductory reviews of mineralogy are written according to the same algorithm sometimes called the Dana System of Mineralogy Even modern advanced handbooks which are certainly necessary include basic data on minerals and are essentially descriptive When basic information on the chemistry structure optical and physical properties distinguished features and paragenesis of 200-400 minerals is presented then there is practically no further space available to include new ideas and concepts based on recent mineral studies A possible solution to this dilemma would be to present a book beginning where introductory textbooks end for those already familiar with the elementary concepts Such a volume would be tailored to specialists in all fields of science and industry interested in the most recent results in mineralogy This approach may be called Advanced Mineralogy Here an attempt has been made to survey the current possibilities and aims in mineral matter investigations including the main characteristics of all the methods the most important problems and topics of mineralogy and related studies The individual volumes are composed of short condensed chapters Each chapter presents in a complete albeit condensed form specific problems methods theories and directions of investigations and estimates their importance and strategic position in science and industry

Advanced Mineralogy Arnold S. Marfunin, 2013-03-07 This volume of Advanced Mineralogy encompasses six different areas having two features in common they are related to one of the largest enterprises of the second half of this century and represent the ultimate and final extension of the concept of mineral matter Understanding mineral matter in Space is one of the principal purposes of cosmic exploration This includes the results of comparative planetology lunar eopoe sophisticated meteorite studies now more than 500 meteorite minerals discovery of the interstellar mineral dust forming some 60 trillion of earth masses in the Galaxy and terrestrial impact crater studies It is possible now to speak of mineralogy of the Universum and the mineralogical type of the states of matter in the Universe Direct samples of mantle xenoliths and ultrahigh pressure temperature experiments make it possible to consider the mineralogical composition of the Earth as a whole including the upper and lower mantle and the Earth's core Deep ocean drilling programs a scientific fleet of hundreds of vessels and several submersibles have brought about great discoveries in the geology metalogeny and mineralogy of the ocean floor the largest part of the Earth's surface in particular revealing new genetic crystallochemical and ore types of mineral formation
