**Nonlinear Acoustics**, 2015 **Theory of Nonlinear Acoustics in Fluids** B.O. Enflo, C. M. Hedberg, 2002-05-31 The aim of the present book is to present theoretical nonlinear acoustics with equal stress on physical and mathematical foundations We have attempted explicit and detailed accounting for the physical phenomena treated in the book as well as their modelling and the formulation and solution of the mathematical models The nonlinear acoustic phenomena described in the book are chosen to give physically interesting illustrations of the mathematical theory As active researchers in the mathematical theory of nonlinear acoustics we have found that there is a need for a coherent account of this theory from a unified point of view covering both the phenomena studied and mathematical techniques developed in the last few decades The most ambitious existing book on the subject of theoretical nonlinear acoustics is *Theoretical Foundations of Nonlinear Acoustics* by O V Rudenko and S I Soluyan Plenum New York 1977 This book contains a variety of applications mainly described by Burgers equation or its generalizations Still adhering to the subject described in the title of the book of Rudenko and Soluyan we attempt to include applications and techniques developed after the appearance of or not included in this book Examples of such applications are resonators shockwaves from supersonic projectiles and travelling of multifrequency waves Examples of such techniques are derivation of exact solutions of Burgers equation travelling wave solutions of Burgers equation in non planar geometries and analytical techniques for the nonlinear acoustic beam KZK equation *Exploiting the Use of Strong Nonlinearity in Dynamics and Acoustics* Oleg V. Gendelman, Alexander F. Vakakis, 2024-07-27 This book covers the latest ideas and approaches in strongly nonlinear dynamical and acoustical systems and discusses appropriate modelling tools and practical examples highlighting the non standard and non stationary aspects of this challenging yet so promising area The contributions investigate and present the intentional use of nonlinearity in the most challenging field of acoustics the latest developments in transient dynamics of strongly nonlinear systems the subtle numeric problems arising while exploring nonlinear normal modes the fascinating topic of nonlinear dynamics of wind musical instruments the novel developments in the field of global nonlinear dynamics some multi faceted mathematical challenges in the dynamics of hysteretic systems and lastly offers theoretical numeric and experimental insights into the intricate dynamics of systems with contact nonlinearities The need for such a work is underscored by the fact that accounting for understanding of and designing with nonlinearities is becoming an emerging universal trend in engineering practice and is predicted to be even more so in the future The book demonstrates that the idea of exploiting strong nonlinearity in dynamical and acoustical systems has transitioned from few early theoretical works to a diverse theoretical and experimental body of current research Selected advanced topics in
