Advances In Software Tools For Scientific Computing:

Advances in Software Tools for Scientific Computing Hans P. Langtangen, Are M. Bruaset, Ewald Quak, 2012-12-06
To make full use of the ever increasing hardware capabilities of modern computers it is necessary to speedily enhance the performance and reliability of the software as well and often without having a suitable mathematical theory readily available. In the handling of more and more complex real life numerical problems in all sorts of applications a modern object oriented design and implementation of software tools has become a crucial component. The considerable challenges posed by the demand for efficient object oriented software in all areas of scientific computing make it necessary to exchange ideas and experiences from as many different sources as possible. Motivated by the success of the first meeting of this kind in Norway in 1996 we decided to organize another International Workshop on Modern Software Tools for Scientific Computing often referred to as SciTools 98. This workshop took place in Oslo Norway September 14-16 1998. The objective was again to provide an open forum for exchange and discussion of modern state of the art software techniques applied to challenging numerical problems. The organization was undertaken jointly by the research institute SINTEF Applied Mathematics the Departments of Mathematics and Informatics at the University of Oslo and the company Numerical Objects AS.

Modern Software Tools for Scientific Computing Erlend Arge, Are Magnus Bruaset, Hans Petter Langtangen, 1997-01-01
Surveys some recent advances in 17 selected and refereed papers from an international workshop held in Oslo Norway in September 1996. In general they cover computational differential equations, computational geometry and software development. Among the specific topics are object oriented solvers for initial value problems, the efficient implementation of multilevel adaptive methods, object oriented scattered data modelling with Siscat and automating the debugging of large numerical codes. Parallel Processing for Scientific Computing Michael A. Heroux, Padma Raghavan, Horst D. Simon, 2006-01-01
Parallel processing has been an enabling technology in scientific computing for more than 20 years. This book is the first in depth discussion of parallel computing in 10 years; it reflects the mix of topics that mathematicians

computer scientists and computational scientists focus on to make parallel processing effective for scientific problems Presently the impact of parallel processing on scientific computing varies greatly across disciplines but it plays a vital role in most problem domains and is absolutely essential in many of them Parallel Processing for Scientific Computing is divided into four parts The first concerns performance modeling analysis and optimization the second focuses on parallel algorithms and software for an array of problems common to many modeling and simulation applications the third emphasizes tools and environments that can ease and enhance the process of application development and the fourth provides a sampling of applications that require parallel computing for scaling to solve larger and realistic models that can advance science and engineering
