Advances In Biochemical Engineering Volume 25 Chromatography:

Molecular Interactions in Bioseparations That T. Ngo, 2013-11-11 Rapid advances in molecular biology have accelerated the production of a great number of protein based therapeutic agents The major cost in producing these proteins appears to be associated with their purification from the complex mixture of the crude extract A major challenge to the protein biochemist and the biochemical engineer is the development of rapid efficient and cost effective purification systems This volume presents state of the art reviews of current methods used in the purification of biological macromolecules that are based on molecular interactions Thus the major emphasis is placed on affinity related techniques Part I provides a general introduction to affinity chromatography and includes a chapter describing an interesting new technique called slalom chromatography for DNA fractionations Affinity chromatography using molecules of biological origin as the affinity ligand is covered in Part II Part III describes the use of a special class of biomolecules antibodies as affinity ligands Affinity chromatography with biomimetic ligands is discussed in Part IV Newer concepts and their applications in bioseparation are presented in Part V Part VI covers affinity related techniques such as affinity based extracorporeal shunts affinity electrophoresis affinity precipitation and affinity extraction I would like to express my sincere thanks to all the authors who are recognized experts in their respective fields for their cooperation and contributions I thank the editorial staff of Plenum Press for their professionalism and Mary Phillips Born Senior Editor for her encouragement The support of my family Ping and Peilin made it possible to complete editing this book That T
