Rational Homotopy Theory and Differential Forms Phillip Griffiths,John Morgan,2013-10-02 This completely revised and corrected version of the well known Florence notes circulated by the authors together with E Friedlander examines basic topology emphasizing homotopy theory Included is a discussion of Postnikov towers and rational homotopy theory This is then followed by an in depth look at differential forms and de Thom s theorem on simplicial complexes In addition Sullivan s results on computing the rational homotopy type from forms is presented New to the Second Edition Fully revised appendices including an expanded discussion of the Hirsch lemma Presentation of a natural proof of a Serre spectral sequence result Updated content throughout the book reflecting advances in the area of homotopy theory With its modern approach and timely revisions this second edition of *Rational Homotopy Theory and Differential Forms* will be a valuable resource for graduate students and researchers in algebraic topology differential forms and homotopy theory

Advances In The Homotopy Analysis Method Shijun Liao,2013-11-26 Unlike other analytic techniques the Homotopy Analysis Method HAM is independent of small large physical parameters Besides it provides great freedom to choose equation type and solution expression of related linear high order approximation equations The HAM provides a simple way to guarantee the convergence of solution series Such uniqueness differentiates the HAM from all other analytic approximation methods In addition the HAM can be applied to solve some challenging problems with high nonlinearity This book edited by the pioneer and founder of the HAM describes the current advances of this powerful analytic approximation method for highly nonlinear problems Coming from different countries and fields of research the authors of each chapter are top experts in the HAM and its applications

Axiomatic, Enriched and Motivic Homotopy Theory John

Greenlees, 2004-01-31 The NATO Advanced Study Institute Axiomatic enriched and motivic homotopy theory took place at the Isaac Newton Institute of Mathematical Sciences Cambridge England during 9-20 September 2002 The Directors were J P C Greenlees and I Zhukov the other organizers were P G Goerss F Morel J F Jardine and V P Snaith The title describes the content well and both the event and the contents of the present volume reflect recent remarkable successes in model categories structured ring spectra and homotopy theory of algebraic geometry The ASI took the form of a series of 15 minicourses and a few extra lectures and was designed to provide background and to bring the participants up to date with developments The present volume is based on a number of the lectures given during the workshop The ASI was the opening workshop of the four month programme New Contexts for Stable Homotopy Theory which explored several themes in greater depth I am grateful to the Isaac Newton Institute for providing such an ideal venue the NATO Science Committee for their funding and to all the speakers at the conference whether or not they were able to contribute to the present volume All contributions were refereed and I thank the authors and referees for their efforts to fit in with the tight schedule Finally I would like to thank my coorganizers and all the staff at the Institute for making the ASI run so smoothly J P C GREENLEES *Advances in Two-Dimensional Homotopy and Combinatorial Group Theory* Wolfgang Metzler, Stephan Rosebrock, 2018 Presents the current state of knowledge in all aspects of two dimensional homotopy theory Useful for both students and experts Local Homotopy Theory John F. Jardine, 2015-05-27 This monograph on the homotopy theory of topologized diagrams of spaces and spectra gives an expert account of a subject at the foundation of motivic homotopy theory and the theory of topological modular forms in stable homotopy theory Beginning with an introduction to the homotopy theory of simplicial sets and topoi the book covers core topics such as the unstable homotopy theory of simplicial presheaves and sheaves localized theories cocycles descent theory non abelian cohomology stacks and local stable homotopy theory A detailed treatment of the formalism of the subject is interwoven with explanations of the motivation development and nuances of ideas and results The coherence of the abstract theory is elucidated through the use of widely applicable tools such as Barr's theorem on Boolean localization model structures on the category of simplicial presheaves on a site and cocycle categories A wealth of concrete examples convey the vitality and importance of the subject in topology number theory algebraic geometry and algebraic K theory Assuming basic knowledge of algebraic geometry and homotopy theory Local Homotopy Theory will appeal to researchers and advanced graduate students seeking to understand and advance the applications of homotopy theory in multiple areas of mathematics and the mathematical sciences **Advanced Topics of Topology** Francisco Bulnes, 2022-07-27 Topology is an area of mathematics that establishes relations and transformations between spaces with a certain structure depending on their position and considering the structure of the ambient space where these relations exist This book discusses various concepts and theories of topology including diffeomorphisms immersions Hausdorff spaces cobordisms homotopy theory symplectic manifolds topology of quantum field theory algebraic varieties dimension theory

Koszul complexes continuum theory and metrizable among others *Introduction to Homotopy Theory* Martin Arkowitz, 2011-07-25 This is a book in pure mathematics dealing with homotopy theory one of the main branches of algebraic topology The principal topics are as follows Basic Homotopy H spaces and co H spaces fibrations and cofibrations exact sequences of homotopy sets actions and coactions homotopy pushouts and pullbacks classical theorems including those of Serre Hurewicz Blakers Massey and Whitehead homotopy Sets homotopy and homology decompositions of spaces and maps and obstruction theory The underlying theme of the entire book is the Eckmann Hilton duality theory The book can be used as a text for the second semester of an advanced undergraduate or graduate algebraic topology course [Advanced Topics in Computational Number Theory](#) Henri Cohen, 2012-10-29 The computation of invariants of algebraic number fields such as integral bases discriminants prime decompositions ideal class groups and unit groups is important both for its own sake and for its numerous applications for example to the solution of Diophantine equations The practical completion of this task sometimes known as the Dedekind program has been one of the major achievements of computational number theory in the past ten years thanks to the efforts of many people Even though some practical problems still exist one can consider the subject as solved in a satisfactory manner and it is now routine to ask a specialized Computer Algebra System such as Kant Kash liDIA Magma or Pari GP to perform number field computations that would have been unfeasible only ten years ago The very numerous algorithms used are essentially all described in *A Course in Computational Algebraic Number Theory* GTM 138 first published in 1993 third corrected printing 1996 which is referred to here as CohO That text also treats other subjects such as elliptic curves factoring and primality testing It is important and natural to generalize these algorithms Several generalizations can be considered but the most important are certainly the generalizations to global function fields finite extensions of the field of rational functions in one variable over a finite field and to relative extensions of number fields As in CohO in the present book we will consider number fields only and not deal at all with function fields **Simplicial and Dendroidal Homotopy Theory** Gijs Heuts, Ieke Moerdijk, 2022-08-02 This open access book offers a self contained introduction to the homotopy theory of simplicial and dendroidal sets and spaces These are essential for the study of categories operads and algebraic structure up to coherent homotopy The dendroidal theory combines the combinatorics of trees with the theory of Quillen model categories Dendroidal sets are a natural generalization of simplicial sets from the point of view of operads In this book the simplicial approach to higher category theory is generalized to a dendroidal approach to higher operad theory This dendroidal theory of higher operads is carefully developed in this book The book also provides an original account of the more established simplicial approach to infinity categories which is developed in parallel to the dendroidal theory to emphasize the similarities and differences **Simplicial and Dendroidal Homotopy Theory** is a complete introduction carefully written with the beginning researcher in mind and ideally suited for seminars and courses It can also be used as a standalone introduction to simplicial homotopy theory and to the theory of infinity categories or a standalone

introduction to the theory of Quillen model categories and Bousfield localization [Catalogue, Books and Journals in Advanced Mathematics](#) American Mathematical Society,1985 [Handbook of Homotopy Theory](#) Haynes Miller,2020-01-23

The Handbook of Homotopy Theory provides a panoramic view of an active area in mathematics that is currently seeing dramatic solutions to long standing open problems and is proving itself of increasing importance across many other mathematical disciplines The origins of the subject date back to work of Henri Poincaré and Heinz Hopf in the early 20th century but it has seen enormous progress in the 21st century A highlight of this volume is an introduction to and diverse applications of the newly established foundational theory of categories The coverage is vast ranging from axiomatic to applied from foundational to computational and includes surveys of applications both geometric and algebraic The contributors are among the most active and creative researchers in the field The 22 chapters by 31 contributors are designed to address novices as well as established mathematicians interested in learning the state of the art in this field whose methods are of increasing importance in many other areas [Parametrized Homotopy Theory](#) J. Peter May, Johann Sigurdsson,2006 This book develops rigorous foundations for parametrized homotopy theory which is the algebraic topology of spaces and spectra that are continuously parametrized by the points of a base space It also begins the systematic study of parametrized homology and cohomology theories The parametrized world provides the natural home for many classical notions and results such as orientation theory the Thom isomorphism Atiyah and Poincaré duality transfer maps the Adams and Wirthmüller isomorphisms and the Serre and Eilenberg Moore spectral sequences But in addition to providing a clearer conceptual outlook on these classical notions it also provides powerful methods to study new phenomena such as twisted K theory and to make new constructions such as iterated Thom spectra Duality theory in the parametrized setting is particularly illuminating and comes in two flavors One allows the construction and analysis of transfer maps and a quite different one relates parametrized homology to parametrized cohomology The latter is based formally on a new theory of duality in symmetric bicategories that is of considerable independent interest The text brings together many recent developments in homotopy theory It provides a highly structured theory of parametrized spectra and it extends parametrized homotopy theory to the equivariant setting The theory of topological model categories is given a more thorough treatment than is available in the literature This is used together with an interesting blend of classical methods to resolve basic foundational problems that have no nonparametrized counterparts [Handbook of Tilting Theory](#) Lidia Angeleri Hügel, Dieter Happel, Henning Krause,2007-01-04 A handbook of key articles providing both an introduction and reference for newcomers and experts alike [Axiomatic, Enriched and Motivic Homotopy Theory](#) John Greenlees,2014-01-15
