Enrico Garaci, Rodolfo Paoletti, M. Gabriella Santoro, 2012-12-06 Arachidonic acid metabolites are known to play a regulatory role in a number of biological systems in which they function as microenvironmental hormones and intracellular signal mediators. One of the most exciting areas of research of these compounds is the one that studies the relationship between prostaglandins and tumor cell growth and function. In the last few years there has been an extraordinary evolution of data on prostaglandins and related compounds and cancer. This volume is based on papers presented at the 1986 International Conference on Prostaglandins and Cancer organized by the Italian National Research Council and the II University of Rome and held in Rome, Italy, in June 1986. This Conference brought together oncologists and specialists in the areas of prostaglandin chemistry, biochemistry, pharmacology, physiology, cellular and molecular biology to overview the actual state of knowledge on the role of eicosanoids in cancer and to focus on the key questions that need to be answered. The picture that comes out of this book describes a very complicated network of interactions between arachidonic acid metabolites and different aspects of the complex phenomenon cancer. Eicosanoids participate in carcinogenesis initiation and promotion and their relationship with tumor promoters and growth factors is well established. During cancer growth different prostaglandins can have different roles in the regulation of cell proliferation and differentiation and in metastasis formation. Meanwhile evidence is accumulating for a possible use of some of these compounds as antineoplastic agents. Books in Print, 1994

Mediators of the Inflammatory Process Peter M. Henson, Robert C. Murphy, 1989 Inflammation can be defined as a generalized nonspecific but beneficial response of tissues to injury. The essential protective role of inflammation can easily be seen in the life-threatening genetic diseases in which key elements of the inflammatory reaction are missing or defective. The drive to understand the underlying control processes and

underlying mechanisms derives however more from the pathological perspective than from elucidating defense of the host to injury and has prompted an enormous effort on the part of the pharmaceutical industry to develop efficient antagonists and inhibitors of the molecules involved in these reactions the inflammatory mediators This volume is intended by the authors to provide information on groups of mediators of inflammation in general and where possible to stimulate interest and comments on the possibilities for participation of these communication molecules mediators in the complex but fascinating process of inflammation
