Advances In Nd Yag Laser Surgery:

Advances in Nd:YAG Laser Surgery Stephen N. Joffe, Yanao Oguro, 2012-12-06 The Nd YAG laser has finally become the multidisciplinary and multi-specialty tool of the 1980s. Primarily developed for gastrointestinal applications for controlling bleeding at present it is also used for endoscopic treatment of gastrointestinal tumors, endobronchial cancer and bladder and gynecological lesions and finding applications in otorhinolaryngology and neurosurgery. Development of laser scalpels and focusing head pieces has now allowed the Nd YAG laser to be used for open surgical procedures in general and plastic surgery, head and neck surgery, urology, gynecology, dermatology and neurosurgery. The rapid development in ceramic technology has led to contact surgery allowing physicians a choice of excision, vaporization, coagulation, incision or combinations thereof by easily changing probes rather than having to select new laser wavelengths. This technology is rapidly replacing the carbon dioxide laser which currently has no adequate flexible waveguide for fiberoptic endoscopy cannot be used in a water medium e.g. bladder and has poor coagulation properties when compared to the Nd YAG laser. Future developments may see the Nd YAG laser even replacing electrocautery in the operating room due to its greater safety and efficacy. Local hyperthermia, laserthermia with computer control, photodynamic therapy and ophthalmic applications make the Nd YAG laser the most exciting technological advancement in medicine and surgery for the 1980s. *Advances in Nd* Stephen N. Joffe, 1988
